

The MATADOR.

Premium hand tools and more since 1900.

Be a MATADOR.

Dear friends of
MATADOR,

finally we got it - our new M102.

On 335 pages we present our „world of hand tools“ with many pictures and descriptions, technical details and practical background information.

Starting 120 years ago on two water-powered forging hammers MATADOR today is one of the leading manufacturers of high quality tightening tools „around the screw“.

Although meanwhile more than 4,500 different tools belong to the MATADOR range, it is not our objective to provide you also the fifth version of a standard tool. We at MATADOR keep an eye on the essentials and with our clear focus on quality the professional user will find only tools one really needs and that convince through their quality.

People in more than 70 countries worldwide work with MATADOR.

True to our motto:

Be a MATADOR.

With best wishes

Peter Kissling

The new MATADOR article code:

After 113 years we decided to do something different: We have restructured our article codes in order to give you a better orientation: 8 digits and if possible a hint for the particular size.

For example:

Double Open Ended Spanners, SW 6 x 7 mm

0100 0607

The first 4 digits show the product group, the last 4 digits illustrate the size of a tool (in most cases).

11. Tool Cases / Tool Assortments	300 - 321
12. Technical Tables / Index	322 - 325

Since 1900.

Premium hand tools for professional users. All around the screw.

First team come together in 1906.

MATADOR is one of the **pioneers in the tool industry**. Since 1900 we have been producing **quality hand tools „around the screw“**. Still located in Remscheid - the German centre of the premium tool manufacturers - MATADOR belongs today to the leading German manufacturers of tightening tools.

For over 125 years MATADOR has been a fully privately owned and owner-managed **family enterprise** which is now in its fourth generation. Reliability, a longterm perspective and sustainable business operations form part of our core beliefs and values.

In 1900 Mr Heinrich Kissling, the founder of MATADOR, started on two **water-powered forging hammers** with the production of hand tools. In the following years he filed **many patents** for all kind of hand tools. Considering „MATADOR“ - the Spanish name for the principal bull-fighter - to be an **ideal synonym for strength and energy** he registered the brand name „MATADOR“ at the Commercial Register in 1919: „Wrenches and sockets in the very best quality and workmanship“.

100 years later and with a comprehensive product range of **more than 4,500 catalogue articles** MATADOR is still focussing on tightening tools

around the screw. The hexagon nut held by a stylized wrench as well as the word mark „MATADOR Schraubwerkzeuge“ symbolize the company's origin and its core competence.

As an accredited first tier supplier of **all major OEMs** and with professional customers in more than **70 countries** MATADOR tools are much appreciated by people who are the MATADORS in their field.

Without exaggeration we can say that nearly every professional workshop worldwide is equipped with at least one MATADOR tool.

For everyday heroes.

Be a MATADOR.

MATADOR is **not mainstream**. We stand for upmarket premium tools. Reliable, design-focused, efficient. Intelligent tightening tools made for decision makers, fighters and **everyday heroes**. For real MATADORS.

For people who know and express what they want. People **who are inside the arena**, not in the stands. Who know **the difference between tools and toys**. Who do not seek excuses and are true to themselves. Past and present. For down-to-earth, straightforward and assertive individuals with life experience and stories to tell. Who overcome adversity, manage a healthy work-life balance and **believe in themselves**. Who appreciate the exceptional and do not hesitate to show that.

Welcome to the arena.

MATADOR Spanners. For manual tightening.

Nothing gets done without the good old spanner.

More torque.

To make an accurate and perfectly finished spanner out of a piece of flat steel more than 10 working steps are necessary.

MATADOR processes only high grade, quality-tested Chrome Vanadium steel (31CrV3) that is automatically heated exactly to the right forging temperature.

A precise mechanical processing on state-of-the-art production machines as well as a fully automatic, material-protecting hardening procedure are the basis of the long-lasting quality of our spanners.

Tight spanners tolerances guarantee that the maximum torque can really be applied. And not only the MATADOR Smart Drive profile on the ring side but also precisely grounded heads on the open ended side do not only protect the screw but also ensure that the spanner fits perfectly to the screw.

MATADOR. More torque.
More performance.

Millionfold tried and tested quality.

For more than 110 years MATADOR has been producing several different types of spanners for professional users in industry and craft.

Tightening tools represent our core competence. For screw sizes from 4 up to 230 mm (or 1/4 up to 7.1/2" AF), in metric (mm) or inch (AF) sizes, for fine mechanics and heavy industry – MATADOR surely has the right spanner for your purpose.

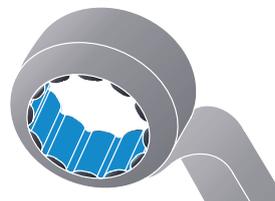

Individual sizes made to measure.

Besides our comprehensive range of standardized and non-standardized sizes MATADOR also produces numerous special sizes and types according to your individual specifications – we will be pleased to assist you.

Ring spanners only with SmartDrive.

As one of the first tool manufacturers MATADOR introduced a special flank drive profile („SmartDrive“) for all ring spanners and sockets already more than 10 years ago. For more torque and less wear.

MATADOR's Classics.

Resilient. Accurate. Flat. Durable. Safe. Non-slip.
Non-glare. Simply good.

Good grip through Matt chrome finish.

Thanks to the complex galvanic treatment with nickel and chrome the spanners do not only get an efficient surface protection but also the perfect and well-known MATADOR look.

Matt chrome finished spanners are real and do not hide their inner values below a nice surface.

MATADOR spanners do not only lie better in your hand and have the edge over mirror-finished spanners when working with oil-smearred hands, they also offer great protection against chrome flaking off even under extreme load.

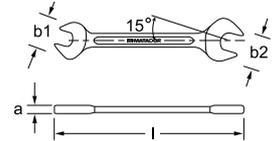

The thin but extremely durable nickel-chrome-coating with non-reflecting effect has proved itself in professional use and is still considered as industrial standard.

Double Open Ended Spanners

- Ideal for tightening hexagon screws and when bolts or cables block the way
- Torque values exceeding DIN standards
- Flat heads for use in confined spaces
- Good grip thanks to matt chrome-plated surface, also with oily hands
- Heads are grinded and polished fully automatically, for longer durability
- Jaws set at 15°

- Standards: DIN 3110 / ISO 3318 / 1085 / 10102
- Material: Chrome Vanadium
- Surface: Matt chrome finish

MATADOR's Classics.

Carefully manufactured for generations.
Our classics.

The most important wrenches.

Even though the number of varieties has increased continuously, in the course of the decades four classic spanners have established that may not be missing in any tools assortment:

- Double Open Ended Spanners (DIN 3110)
- Angled Combination Spanners (DIN 3113 A)
- Offset Combination Spanners (DIN 3113 B)
- Double Ended Ring Spanners (DIN 838)

Equally sized Ring Spanners.

Angled or offset?

Ring Spanners are available in two different versions:

Angled (as per DIN 3113 Form A)
or offset (as per DIN 3113 Form B).

Depending on the case of application both versions have their specific advantages and disadvantages.

Angled ring spanners are flatter and shorter than offset ring spanners and are also lower priced.

But especially in case of deep or hardly accessible screw joints offset ring spanners have the edge over the angled form A. They are longer, have a thicker ring head and can thus reach higher torque values so that particularly professional users give their preference to offset type spanners.

Thus MATADOR - as a manufacturer of tools for professional application - has a much larger range of offset type ring spanners than of angled ring spanners.

Further sizes are available on request.

DIN 3113 A

Flatter angle of DIN 3113 A compared to DIN 3113 B

DIN 3113 B

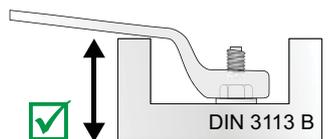

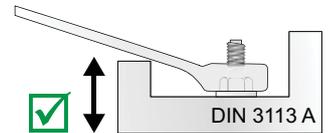

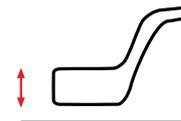

DIN 3113 A

Thinner head of DIN 3113 A compared to DIN 3113 B

DIN 3113 B

■ Combination Spanners Sets

- Tried and tested assortments of angled combination spanners
- All important sizes in one set
- Sets in premium rollbag
- From 6 to 22 mm or from 6 to 32 mm and from 5/16 to 1" AF in different assortments

- Standards: DIN 3113 A / ISO 3318 / 7738
- Material: Chrome Vanadium
- Surface: Matt chrome finish

Double Ended Ring Spanners

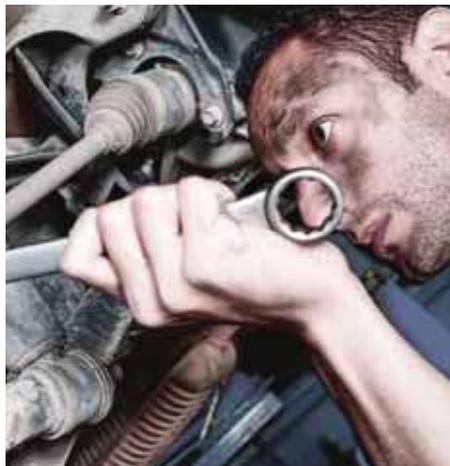

- Classic spanners with deeply offset double ring profile for deep-set screw joints
- 2 sizes per spanner
- High-grade, durable industrial quality
- Good grip thanks to matt chrome-plated surface, also with oily hands
- Heads fully automatically grinded, for longer durability of spanner and screws

- Standards: DIN 838 / ISO 3318 / 1085 / 10104
- Material: Chrome Vanadium
- Surface: Matt chrome finish

MATADOR SmartDrive. The intelligent profile.

Goes easy on the tool and the screw.

Conventional „angular” hexagon or double hexagon profiles transfer considerable tightening and separation forces to the edges of the screw heads.

The consequences:

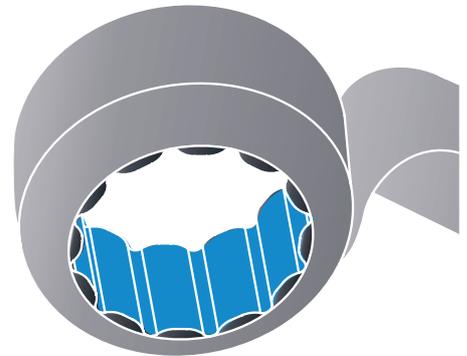

- Lower traction
- Deformed screw heads
- Less contact surface when screw heads are rounded

As one of the first tool manufacturers MATADOR introduced a special flank drive profile („SmartDrive”) for all ring spanners and sockets already more than 10 years ago.

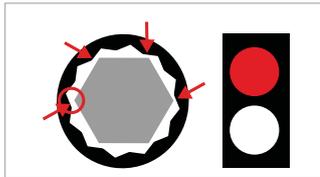

Spanners with MATADOR Smart-Drive profile transfer forces to the flanks of the screw head, not to the edges. Thanks to this flank drive profile the spanners can work on double the contact surface than conventional spanners.

The advantages:

- Optimized traction, even on screws with rounded edges
- Higher torque values
- Ideal protection of the screws and nuts

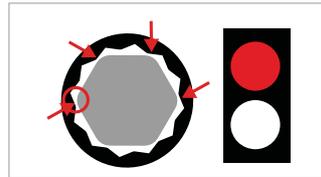

Conventional profile:

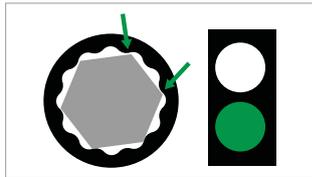

Less traction with angular double hexagon profiles

Conventional profile:

Hardly any traction on screws with rounded edges

MATADOR SmartDrive:

Perfect traction also on screws with rounded edges

MATADOR SmartDrive:

■ Double Ended Ring Spanners Sets

- Tried and tested assortments of ring spanners, all important sizes in one set
 - High-grade, durable industrial quality
 - Good grip thanks to matt chrome-plated surface, also with oily hands

Screw connections in detail.

The screw sizes.

The right spanner for screw and nut.

The width across flats (SW) of a spanner defines the „size“ of the spanner, e.g. SW 13 for 13 mm. The mm and inch units are stamped into the spanner.

Screws and nuts are classified through the nominal diameter (d) of their thread and thus identified e.g. as „M 6“.

Thread diameter and width of the spanner are not identical. The correct spanner-screw combination can be seen from the alongside table:

	M 2	M 2,5	M 3	M 4	M 5	M 6	M 8
	SW 4	SW 5	SW 5,5	SW 7	SW 8	SW 10	SW 13
	M 10	M 12	M 14	M 16	M 18	M 20	M 22
	SW 16 (SW 17)	SW 18 (SW 19)	SW 22	SW 24	SW 27	SW 30	SW 32

Values in brackets = old values are the previously applicable DIN 931 / 933

Spanner sizes for hexagon nuts and screws are defined as per DIN ISO 272. E.g. according to this standard a nut sized M 8 requires a spanner sized 13 mm.

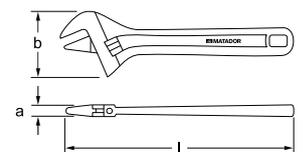

According to the previously valid DIN 931 and 933 the required spanner size for M 10 screws was 17 mm and 19 mm for M 12 screws.

Due to the transformation of the DIN into the international ISO standard the correct spanner sizes became 16 and 18 mm leading to an increased importance of spanners sized 16 and 18 mm.

Adjustable Single Ended Spanner

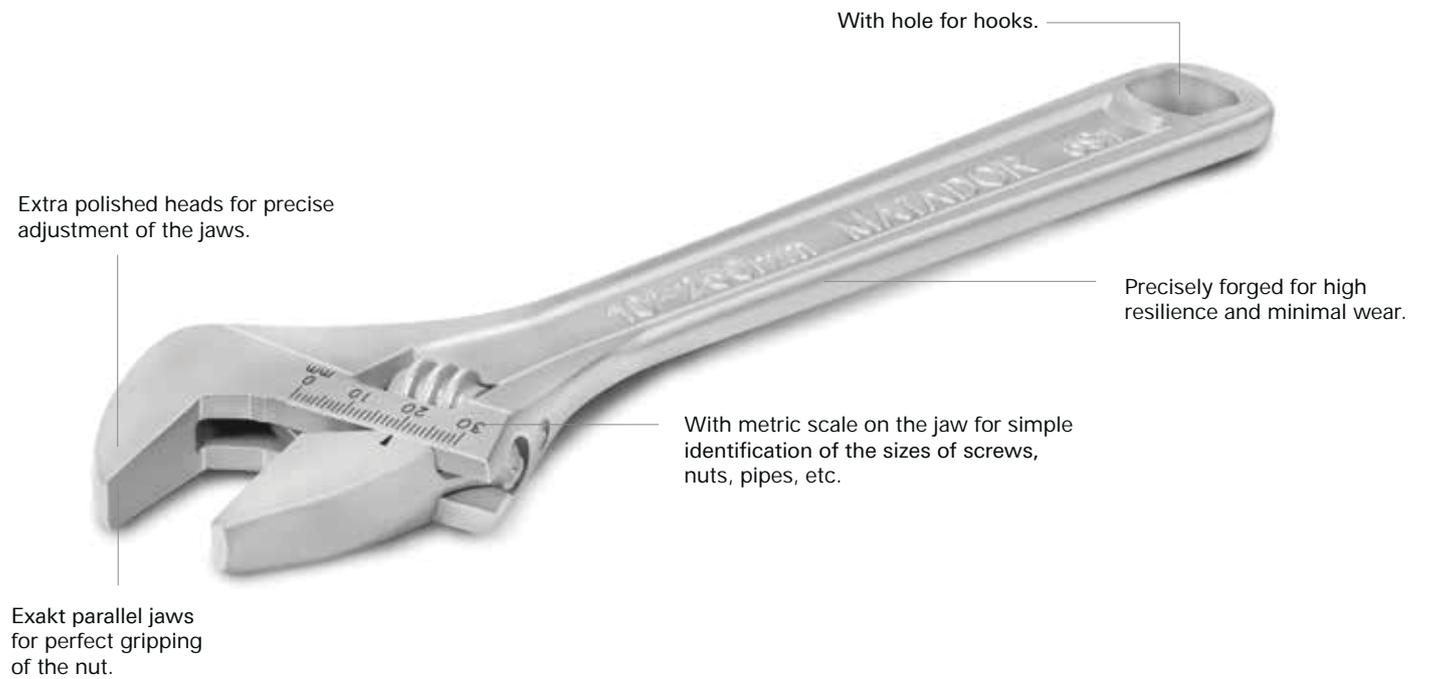

- Individual versatile single ended spanner, thanks to its continuous setting
- Wide range: 6 - 24 mm
- Good grip thanks to knurly spool
- With ergonomic non-slip rubber handle
- With practical hole for hooks

MATADOR Ratchet Spanners. If time is short.

The most important innovation since the invention of spanners.

Made of CHROME VANADIUM Steel for high resilience and minimal wear.

Exceeds the torque values of standard combination spanners.

With 72 teeth.

With patented GEARplus[®] technique.

2 in 1: Ratchet Spanners.

MATADOR Ratchet Spanners combine the advantages of a ratchet with those of a slim spanner:

The ultra slim design of the ring side allows fast working in confined spaces, even where conventional ratchets with sockets are not applicable. For instance the thickness of the ring side of a ratchet spanner is only 1/5 of the height of a standard ratchet with socket.

The open ended side is appropriate for all screw connections where bolts or cables block the way.

Higher torque value in most confined spaces.

MATADOR relies on the tried and tested GEARplus[®] technique which is made of specially hardened and Tempered steel.

The progressive toothing of the inserted ratchet gear allows the transmission of up to 30% more torque compared to previous ratchet spanners and reaches and even exceeds the DIN / ISO torque standards for standard combination spanners.

Thanks to the ratcheting angle of only 5° and the 72 teeth ratchet mechanism screw connections can be tightened or loosened at a previously unknown speed – without resetting.

With MATADOR SmartDrive profile.

Of course, all MATADOR ratchet spanners are provided with MATADOR SmartDrive profile.

MATADOR SmartDrive profile transmits forces at 100% to the flanks of the screw head or the nut, not to the edges. Thanks to this flank drive profile the spanners work on double the contact surface than conventional spanners, even rounded screws are no problem.

The advantages:

- Optimized traction, even on screws with rounded edges
- Higher torque values
- Ideal protection of the screws and nuts

What are the benefits of ratchet spanners?

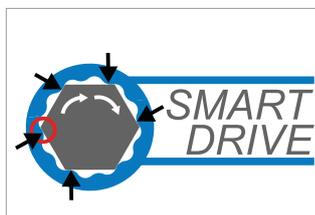

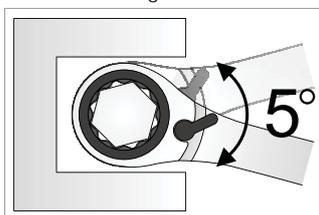

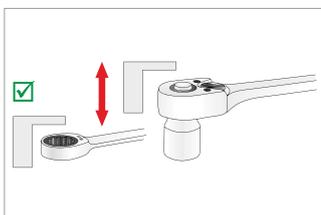

One can no longer imagine a modern workshop without ratchet spanners.

Meanwhile millionfold tried and tested ratchet spanners often replace the use of standard ratchets and spanners. Through the flat design they reach spaces where standard reversible ratchets with sockets cannot be used.

Thanks to the innovative ratchet technique screws can be tightened up to 7x faster because there is no need for resetting the tool.

And by the way ratchet spanners reach nearly identical torque values compared to standard spanners.

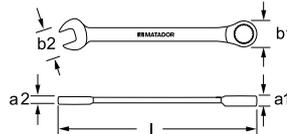

Powerful, flat, fast.

■ Combination Ratchet Spanners, straight

- Combination ratchet spanners, straight type
 - With 72 teeth, very high torque values (exceeding DIN 3110 / ISO 3318)
 - With patented ratchet gear (GEARplus®) made of special steel with 72 teeth
 - Simply turn around for clockwise / anticlockwise use
 - Jaws set at 15°
- Standards: Similar to DIN 3113 A, ISO 3318 / 7738
 - Material: Chrome Vanadium
 - Surface: Matt chrome finish

■ Combination Ratchet Spanners, angled

- Combination ratchet spanners, angled type, jaws set at 15°
- With 72 teeth, very high torque values (exceeding DIN 3110 / ISO 3318)
- With patented ratchet gear (GEARplus®) made of special steel with 72 teeth
- With switch lever
- Standards: Similar to DIN 3113 A / ISO 3318 / 7738

- Material: Chrome Vanadium
- Surface: Matt chrome finish

■ Adapters for Ratchet Spanners

- Makes an ultra-flat ratchet out of a ratchet spanner (10 mm = 1/4" or 1/4" Bit, 13 mm = 3/8" and 19 mm = 1/2")
- With push-button quick-release function
- Applicable for ratchet spanners with GEARplus® technique

- Standards: DIN 3120 / ISO 1174 DIN 3126 / C 6,3
- Material: Chrome Vanadium
- Surface: Polished chrome finish

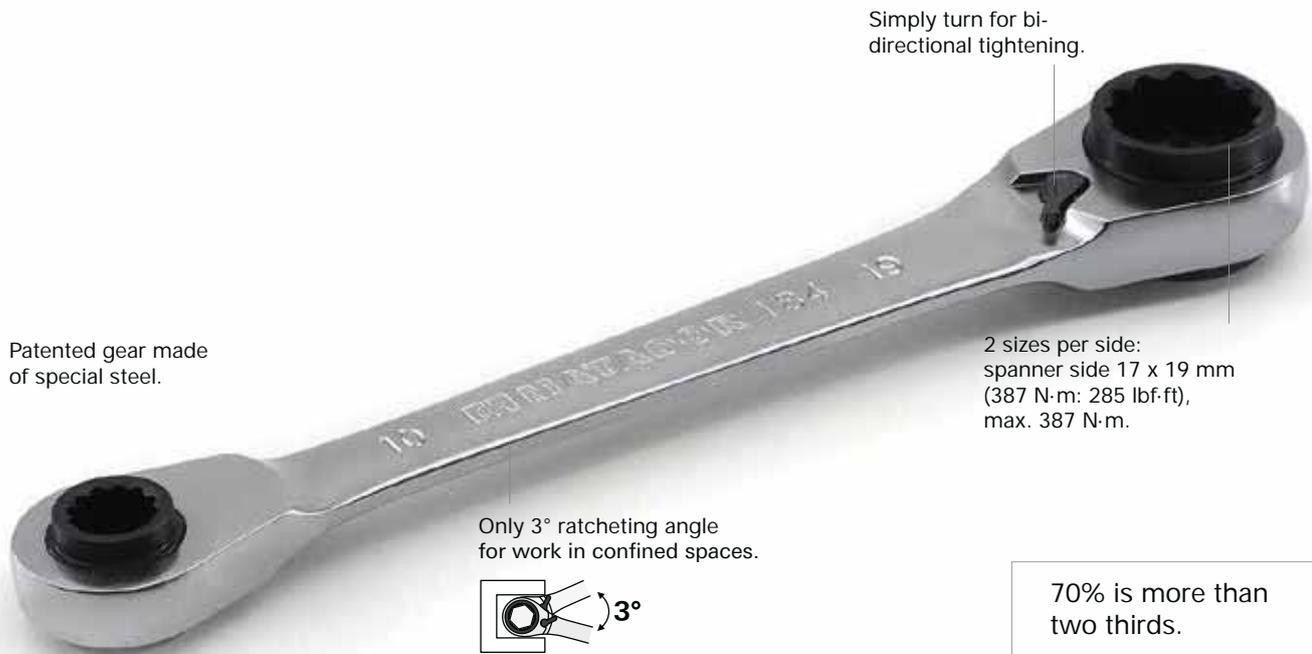

Art. Code	g	
0186 0010	60	1
Content	0186 6,3 (1/4) Bit - 6,3 (1/4) - 10 (3/8) - 12,5 (1/2) mm	

4in1 Ratchet Spanner.

Suitable for 70% of all screw tasks.

Ideal for mobile use.

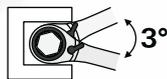

Patented gear made of special steel.

Simply turn for bi-directional tightening.

2 sizes per side:
spanner side 17 x 19 mm
(387 N·m: 285 lbf·ft),
max. 387 N·m.

Only 3° ratcheting angle for work in confined spaces.

2 sizes per side:
spanner side 10 x 13 mm
(138 N·m: 102 lbf·ft),
max. 138 N·m.

70% is more than two thirds.

MATADOR's „4in1“ ratchet spanner must not be missing in any modern tools assortment.

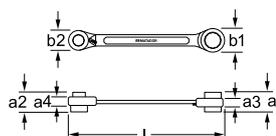

70% of all screws and nuts need a spanner size of 10, 13, 17 or 19 mm - and this is exactly what the „4in1“ ratchet spanner provides. Especially in cases when a complete spanner set is not at hand (e.g. during mobile use) 70% of all possible screw tasks (thus more than two thirds!) can be solved only with this single spanner - with torque values exceeding those of a standard spanner.

4in1 Ratchet Spanner

- 4 ratchet spanners in one tool, combines 10, 13, 17 and 19 mm
- For 70% of all screw tasks
- With patented ratchet gear ("Reverse Gear") made of special steel with 120 teeth
- Transmits very high torque values
 - Size 10 x 13 = max. 138 Nm
 - Size 17 x 19 = max. 387 Nm

- Only 3° ratcheting angle thanks to 120 teeth - especially suitable for confined spaces

- Material: Chrome Vanadium
- Surface: Matt chrome finish

MATADOR Slogging Spanners.

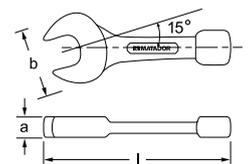

Rise to the challenge.

■ Slogging Open Ended Spanners (MM)

- Tried and tested MATADOR classic
 - For tightening and loosening of big screw joints, e.g. in heavy industry, shipbuilding, plant construction, etc.
 - Ideal for the use with club hammer or air hammer
 - Precisely drop-forged
 - Very high impact strength
 - Up to 500 mm made of Chrome Vanadium steel 31 CrV 3, from 525 mm made of C 35
 - With zinc-plated surface for durable rust protection - not only sandblasted / oiled
- Standards: DIN 133 (except for special sizes *)
 - Material: 31 CrV 3 / C 35
 - Surface treatment: Zinc-plated

The perfect leverage effect.

Long lever - large impact.

The perfect leverage effect.

Very convenient: The perfectly fitting extension pipes for MATADOR Heavy Duty Ring Spanners.

The increased lever transmission makes it possible to move big screws manually with relatively little effort. The locking pin allows quick assembly and disassembly.

Available in four sizes up to 105 mm. Special sizes on request.

■ Extension Pipes for Heavy Duty Ring Spanners

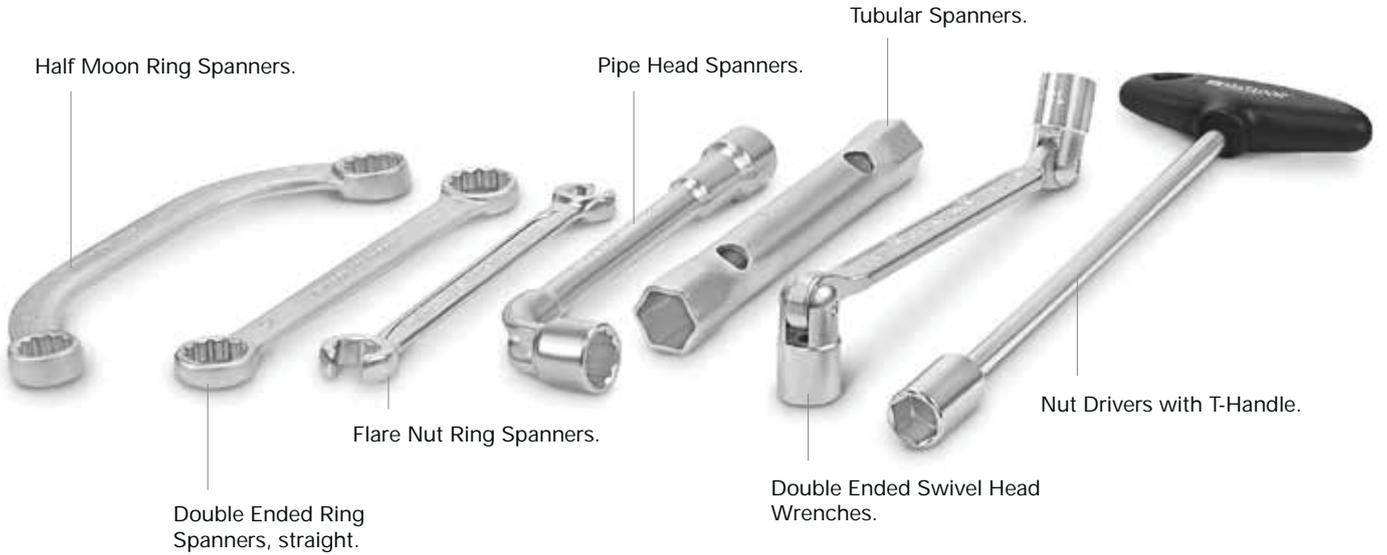

- For extension of the lever arm and increased force action
- With hole for safe locking and unlocking
- Material: 31 CrV 3
- Surface treatment: Zinc-plated

MATADOR drive technology. Benefit from experience.

In the beginning there was only an idea.

MATADOR's first reversible ratchet made in 1924, patented in Germany.

2018 model of the MATADOR reversible ratchet.

Why recessed switch lever?

MATADOR reversible ratchets are basically equipped with recessed switch levers.

In comprehensive application studies we found that the most common cause of defect is a torn-off switch lever. In daily use in workshops reversible ratchets are often simply thrown into the tool box or even misused as hammers. Yet a light tap on a protruding lever can cause it to tear off and render it impossible to continue work.

Since 1900 we think about drive technology.

Often, less is more.

The intrinsic values are what counts.

As one of the first manufacturers in Europe already in 1924 MATADOR presented its first reversible ratchet which was patented in Germany.

It is not our objective to offer the most extensive range of ratchets in the market and to sell "old wine in new bottles".

Besides a proper use the lifetime of a ratchet is substantially determined by the quality of the components.

In the course of the following years a comprehensive range of operating tools had been developed.

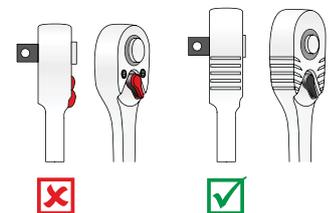

Instead we concentrate on our core competences and have only those ratchets in our range that are really needed in practice and that meet our strict requirements in terms of quality.

For instance, the MATADOR reversible ratchet with 12.5 mm (½") drive is made of 12 individual components that are precisely matched to each other. Especially the toothed ratchet wheel, the pawl made of heavy duty steel for fixing the wheel as well as the lever for switching from clockwise to anti-clockwise operation are parts that are exposed to heavy load. The ideal composition of the used material as well as a perfect machining are of great importance.

Nowadays, CNC-controlled processes allow the production of top quality ratchets. However, their core function has not changed significantly. Back then as well as today ratchets help tightening or loosening screwed connections quickly by hand.

No toys but solid technology for professional users at an appropriate price/performance ratio.

To help you concentrate on your work.

That is why MATADOR countersinks the switch levers into the ratchet body creating an even and invulnerable surface.

A small detail with high effect.

All ratchets at a glance.

Get back to basics.

From 6.3 (1/4") up to 25 (1") drive. Extremely short for confined spaces or extremely long for high torque transmission. Or extendible. Or swivelling. Normal-toothed or fine-toothed with 72 teeth for only 5° swivel angle. With lever or push-through-technology.

You don't find what you need? Please contact us.

			6.3 mm 1/4	10 mm 3/8	12.5 mm 1/2	20 mm 3/4	25 mm 1
	 Reversible Ratchet with joint, fine-toothed	2063 0002	--	--	--	--	--

How much torque do you need? Minimum torque requirements according to DIN 3122 for reversible ratchets:

		6.3 mm 1/4	10 mm 3/8	12.5 mm 1/2	20 mm 3/4	25 mm 1
	up to a max. swivel angle of 20°	62 N·m	202 N·m	--	--	--
	up to a max. swivel angle of 15°	--	--	512 N·m	1412 N·m	2515 N·m

MATADOR Sockets with Super-Chrom and SmartDrive².

Our range of sockets and screwdriver bit sockets for professional use.

Super-Chrom coating outside and inside - for permanence and durability.

From 6.3 (1/4") to 20 (3/4") with SmartDrive².

All tools are automatically stamped, not only lasered.

From 10 (3/8") to 12.5 (1/2") with cross knurling for quick manual operation (also with oily hands).

4 deep milled ball grooves for secure hold.

Higher torque values thanks to SmartDrive.

As one of the first tool manufacturers MATADOR introduced a special flank drive profile ("SmartDrive") more than 10 years ago.

Sockets with MATADOR Smart-Drive profile distribute the power to the screw head flanks, not to the edges. As a result MATADOR sockets work on about double the contact surface as conventional sockets.

The advantages:

- Optimized traction, even on worn screws
- Higher torque values
- Ideal protection of the screws

All MATADOR sockets with square drives from 6.3 (1/4") up to 20 (3/4") are supplied with SmartDrive.

And what's more: SmartDrive².

The perfect add-on to SmartDrive is SmartDrive².

Also on the drive end of a socket enormous power is applied and the optimal traction between the outer square of the operating tool and the inner square of the socket is highly important.

That's why the inner squares of the MATADOR sockets are also provided with a SmartDrive profile: The edges of the outer square will be protected thanks to the notches. Slightly convex flanks transfer the power to the plane surface.

MATADOR SmartDrive² - you should not be content with less.

MATADOR SuperChrom.

Generally quality hand tools undergo a fully galvanic treatment, i.e. they are first nickel-plated and then chrome-plated.

Through the (yellowly shimmering) nickel coating the tools get rust protection and through chrome which is applied afterwards they receive their silvery shiny appearance.

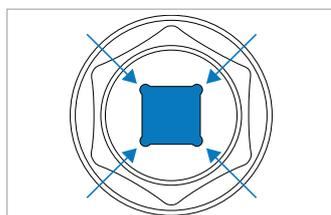

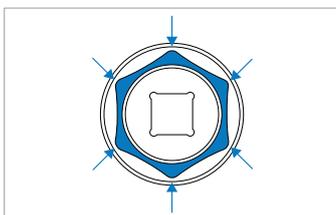

MATADOR SuperChrom goes one step further: Through especially intense grinding the tools get a very smooth surface. Afterwards they will be finished optimally with a very resistant and thick nickel-chrome-plating - of course chrome VI free and environmentally friendly.

Inner values combined with a valuable appearance.

In the result SuperChrom does not only look much more valuable but it also significantly improves the resistance to external impacts.

Chrome spalling due to heavy duty application, scratches on the surface etc. and thus potential patches of rust are things of the past.

Please test yourself and compare MATADOR SuperChrom tools with conventionally chrome-plated tools - you will be impressed.

Alle Steckschlüssel auf einen Blick.

Von der Feinmechanik bis hin zur Schwerindustrie.

The MATADOR articulated ratchet in 6.3 (1/4").

Small, handy and swivelling.

Safety Lock
With safety lock and quick-release function.

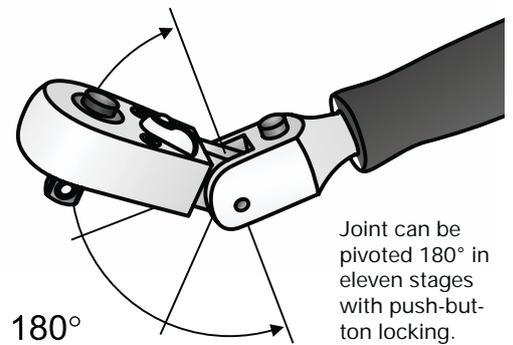

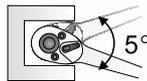

Ergonomic handle.

Recessed lever for clockwise and anti-clockwise movement.

Fine-toothed with 72 teeth for only 56° swivel angle.

Joint can be pivoted 180° in eleven stages with push-button locking.

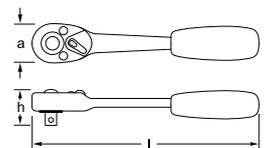

180°

Articulated Ratchet

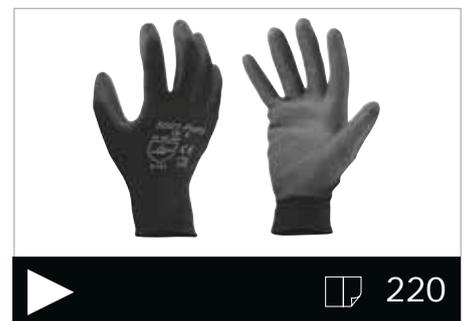

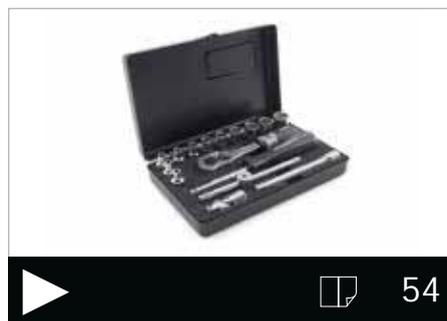

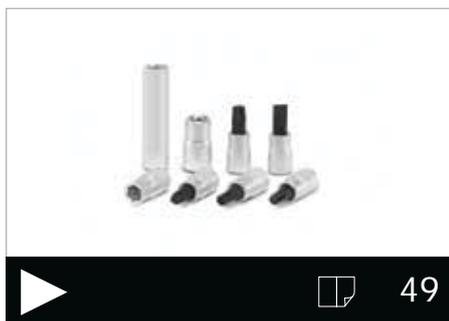

- Small ratchet head for confined spaces
- With safety lock and quick-release function
- With lever
- Fine-toothed with 72 teeth
- For hand-operated sockets and adapters
- With square drive as per DIN 3120 - C 6.3 / ISO 1174

- Standards: DIN 3122 / ISO 3315
- Material: Chrome Vanadium
- Surface: Matt chrome finish

The new MATADOR Z90 reversible ratchet in 6.3 (1/4").

More teeth. More power. More grip. More applications. More design.

25%

reduced angle (only 4°) compared to standard fine-toothed ratchets thanks to an innovative 90-teeth technique. Still ready for working even when it gets really tight.

4°

50%

more torque than requested in the DIN standard (e.g. 12.5 mm (1/2") > 750 N·m). Still loosens screws when others have long given up.

max.

ergonomics thanks to multi-component handle, better than standard 1- or 2-component handles. Optimally adapted, spherical shape.

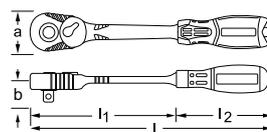

6.3 mm
1/4

■ Reversible Ratchet

- Extremely robust square shank made of Chrome Vanadium steel for high resilience in every situation
- Push-button lock for a safe connection between ratchet and socket
- Recessed, flat lever for quick change of direction
- Fine-toothed with 90 teeth, only 4° swivel angle
- For hand-operated sockets and adapters
- Practical hanging loop to secure the ratchet during construction work or to hang on a tools panel

- Standards: DIN 3122 / ISO 3315
- Material: Chrome Vanadium
- Surface: Matt chrome finish

- Very functional, for hard-to-reach areas
- Can be used as T-Handle or L-Handle
- Can also be used as extension together with a ratchet thanks to inner square C 6.3 on the T-Handle side
- With universal joint for flexible use
- With ball locking device
- For hand-operated sockets and adapters

- Square drive acc. to DIN 3120 - A 6.3 / ISO 1174
- Standards: DIN 3123 / ISO 3316
- Material: Chrome Vanadium
- Surface: Super-Chrom

Ratchets and sockets in 10 mm (3/8"). The perfect compromise.

Compact size, high torque values.

25%

reduced angle (only 4°) compared to standard fine-toothed ratchets thanks to an innovative 90-teeth technique. Still ready for working even when it gets really tight.

10 mm
3/8"

max.

ergonomics thanks to multi-component handle, better than standard 1- or 2-component handles. Optimally adapted, spherical shape.

4°

50%

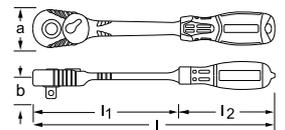

more torque than requested in the DIN standard (e.g. 12.5 mm (1/2") > 750 N·m). Still loosens screws when others have long given up.

■ Reversible Ratchet

- Extremely robust square shank made of Chrome Vanadium steel for high resilience in every situation
- Push-button lock for a safe connection between ratchet and socket
- Recessed, flat lever for quick change of direction
- Fine-toothed with 90 teeth, only 4° swivel angle
- For hand-operated sockets and adapters
- Practical hanging loop to secure the ratchet during construction work or to hang on a tools panel

- Standards: DIN 3122 / ISO 3315
- Material: Chrome Vanadium
- Surface: Matt chrome finish

The new MATADOR Z90 reversible ratchet in 6.3 (1/4"). More teeth. More power. More grip. More applications. More design.

25%

reduced angle (only 4°) compared to standard fine-toothed ratchets thanks to an innovative 90-teeth technique. Still ready for working even when it gets really tight.

12,5 mm
1/2"

max.

ergonomics thanks to multi-component handle, better than standard 1- or 2-component handles. Optimally adapted, spherical shape.

50%

more torque than requested in the DIN standard (e.g. 12.5 mm (1/2") > 750 N·m). Still loosens screws when others have long given up.

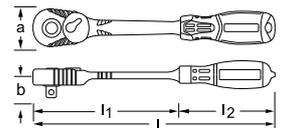

4°

■ Reversible Ratchet

- Extremely robust square shank made of Chrome Vanadium steel for high resilience in every situation
- Push-button lock for a safe connection between ratchet and socket
- Recessed, flat lever for quick change of direction
- Fine-toothed with 90 teeth, only 4° swivel angle
- For hand-operated sockets and adapters
- Practical hanging loop to secure the ratchet during construction work or to hang on a tools panel

- Standards: DIN 3122 / ISO 3315
- Material: Chrome Vanadium
- Surface: Matt chrome finish

Care instructions
for ratchets.

High quality ratchets from MATADOR can be used for a lifetime operation, if they are treated with a little care:

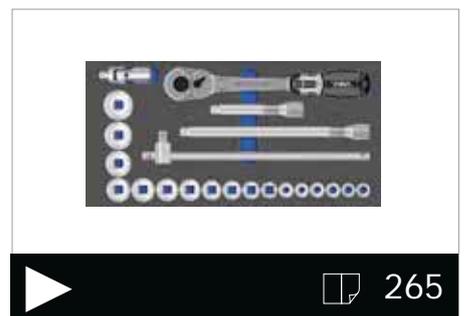

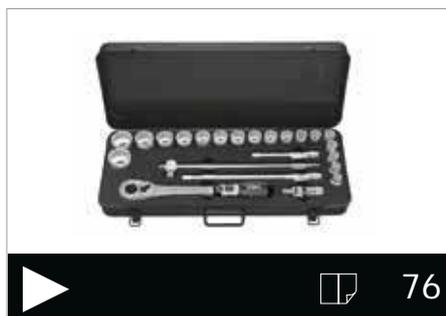

Never use the ratchet as a hammer!

Do not clean the ratchet under water as this reduces the lubrication of the gear mechanism.

MATADOR Super Chrome.

The original since 1934.

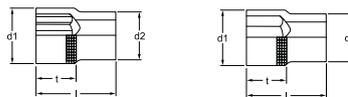

The perfect surface treatment.

■ Sockets (MM)

- For hexagon head screws
- For hand operation
- Square drive acc. to DIN 3120 - C 12.5 / ISO 1174
- With six point or double six point profile
- With non-slip cross knurling
- With MATADOR SmartDrive profile
- MATADOR Super-Chrom for long-lasting rust protection

- Standard: DIN 3124 / ISO 2725-1
- Material: Chrome Vanadium
- Surface: Super-Chrom

Reversible Ratchet with 20 mm (3/4") drive. 1 600 N·m torque and 72 tooth mechanism.

For heavy maintenance in industry and workshop.

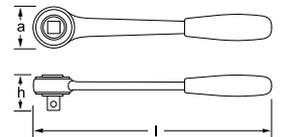

■ Reversible Ratchet (72 T)

- With non-slip metal disc change
- Fine-toothed with 72 teeth
- For hand-operated sockets and accessories with locking pin
- Standards: DIN 3122 / ISO 3315

- Material: Chrome Vanadium
- Surface: Matt chrome finish

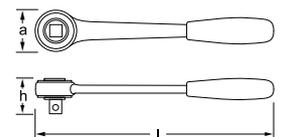

Art. Code	mm	"	l mm	a mm	h mm	g

-----	--------------------

MATADOR torque technique. The basics of controlled tightening.

Whenever it must be safe.

Controlled tightening is the standard of today.

In order to save raw materials, weight and costs, in modern assembly technology screws become more and more small and lightweight. At the same time the requirements increase in terms of durability of a screw connection.

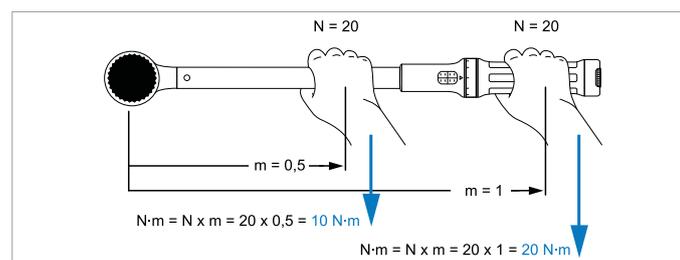

Nowadays for nearly 100% of all industrial screw connections controlled tightening is required.

Controlled means with a predefined torque value or torque angle, so that the remaining clamp force ensures the operating safety of the screw connection.

Screw connections are very complex physical processes influenced by numerous variables. The most important factors that determine the quality of a screw connection are torque, clamp force, friction and joint hardness. Only the knowledge and consideration of all four influencing factors will lead to really safe and reliable screw connections.

What is torque?
Force times distance.

Torque is derived from the physical factors "force times distance" applied to a rotating movement: The longer the distance and/or the higher the force, the higher the rotary force and thus the torque.

The metric unit that is mainly used to measure torque is newton meter (abbr. N-m). According to this Force F (N) x Lever Arm L (m) = Torque M (N-m).

Torque wrenches measure the force

$$M = F \cdot r$$

that is applied to a screw connection – nothing less, but unfortunately also nothing more.

It is not only length that matters.

Based on the lever rule it is essential that torque wrenches are only operated using the handle. An extension or shortening of the lever arm leads to changed torque values.

This applies for all torque wrenches, unless stated otherwise. E.g. the MATADOR 6174 series torque wrenches with close gap release allow tightening from any position without any value shifts.

In most cases classic torque wrenches are appropriate in order to achieve a controlled manual tightening of screw connections with an adequate accuracy.

Due to friction 90% of applied forces get lost.

But as soon as an optimal and safe screw connection is essential, manual torque wrenches are no longer appropriate. The applied torque is not equal to the reached clamp force and the measured values are thus too inaccurate.

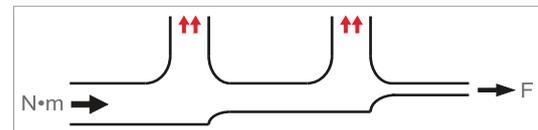

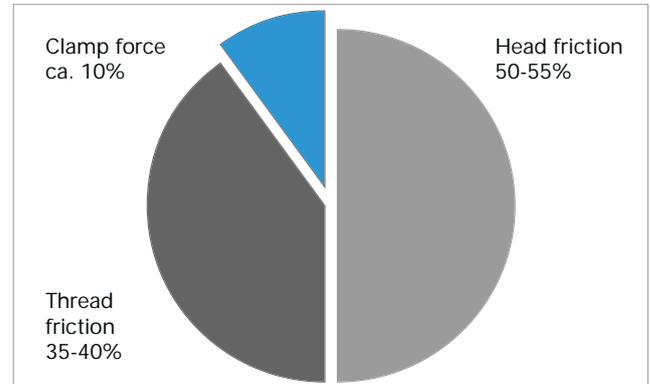

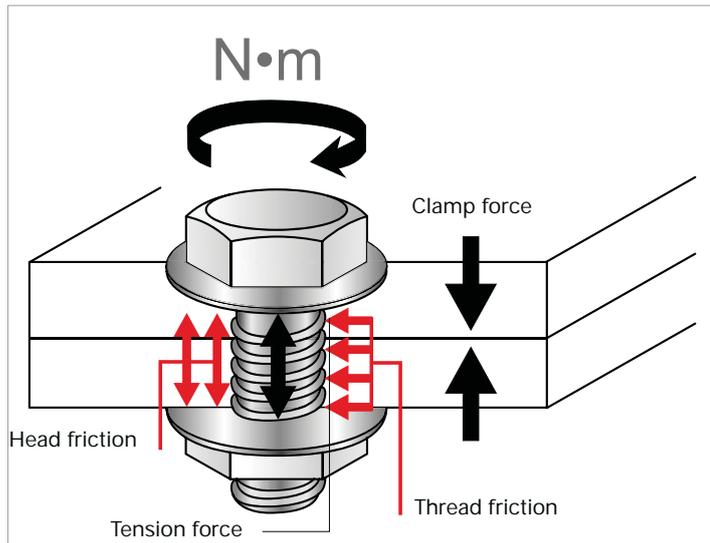

The largest instability factor during tightening is friction that occurs at the thread and below the screw head.

The force known as clamp force, that is supposed to be reached by means of a screw connection, generates a clamping pressure between the screwed workpieces.

The pressure leads to an increased friction between the workpieces and prevents them from coming loose unintentionally. However, these friction forces work against the torque, i.e. they prevent the applied torque from being converted into clamp force to its full extent. Only ~10% of the applied torque is transformed into clamp force.

Torque angle instead of torque value. The better choice when it really counts.

Optimal clamp force without friction losses. To ensure that you get out what you put in.

Higher level of accuracy through torque angle.

Minimizing friction to a minimum level.

Each screw is different.

Torque technique for professionals.

In order to achieve a higher level of accuracy also during manual tightening, nowadays – especially in automotive industry – mainly angle-controlled tightening processes are applied.

During angle-controlled tightening the screw is first tightened to a predetermined trigger torque value – just like during torque-controlled tightening. From this trigger torque value onwards the screw is further rotated by a preset torque angle.

Required torque and torque angle are mostly stated in the directives for the respective joint.

No matter how accurate a screw connection is to be tightened: MATADOR has the right torque tools for every case of application.

After being positioned on a work-piece every screw can rotate to a certain extent until its end torque is reached.

The cut-out torque is monitored and documented via internal memory or PC interface.

One has to consider that for angle-controlled tightening only special anti-fatigue bolts with sufficient grip length should be used. Screws that have been used for angle-controlled tightening should not be reused since their strength can be reduced.

Starting from simple torque wrenches for semi-professional use up to electric torque/torque angle wrenches – all from a single source.

This rotation is measured in angular degrees. In case the torque angle between positioning and end torque is low this is called a hard joint (e.g. for metal fittings). In case the angle is high this is called a soft joint (e.g. for wood fittings).

When torque angle tightening is applied correctly the screw is specifically moved into its plastic deformation. In order to reduce the spreading of the clamp force as far as possible the screw is usually tightened beyond its elastic limit.

A general rule says that the softer the joint the higher the friction losses and the lower the reached clamp force.

If during angle-controlled tightening the screw is only strained within the elastic range the friction is very high and the clamp force spreads accordingly - just like during torque-controlled tightening. Thus exact knowledge about the employed screw is vital.

The MATADOR PRO PLUS torque angle wrenches provide a remedy and help the user to reach the optimal clamp force by displaying the torque angle.

We will be pleased to assist you.

Torque Conversion Factors

The right torque wrench.

It depends on the case of application.

Dial type or click type?

Dial type torque wrenches indicate the value of the applied torque via a mechanical scale or a dial gauge.

As soon as the target torque is reached the user has to stop exerting additional force on the torque wrench. Dial type torque wrenches are quick and easy to operate and but they are not as accurate as click type torque wrenches.

At click type torque wrenches the target torque value is set via a scale at the handle. As soon as the set target torque value is reached the wrench indicates this by a palpable and audible signal.

In MATADOR torque wrenches the measuring elements made of spring steel are only loaded during tightening. Thus the torque wrench does not need to be reset and the wrench is immediately ready to continue operation.

With or without calibration certificate?

According to DIN EN ISO 6789 torque wrenches are measuring instruments that - in certified companies - are subject to a constant monitoring.

The calibration certificate documents the admissible tolerance a torque wrench reaches if it is loaded 5 000 times in each direction of use with the max. value. Depending on the wrench type DIN EN ISO 6789 demands a max. tolerance of $\pm 6\%$ up to $\pm 4\%$.

After 12 months of use or 5000 load changes a re-calibration of the torque wrench is required.

MATADOR Service.

MATADOR's inexpensive calibration service includes the standard factory certificate according to DIN EN ISO 6789 and on demand also the certificate according to DKD guidelines. We maintain and calibrate MATADOR torque wrenches within 5 days after receipt according to DIN EN ISO 6789 including factory certificate and test badge.

Which drive?

Torque is applied either via the square drive which is used with standard sockets or via a rectangular tool holder (9 x 12 or 14 x 18 mm) for exchangeable insert tools.

When using insert tools it is important to consider that the length of the insert tool corresponds to the set depth gauge. Otherwise the displayed values and the setting values have to be adjusted due to the differing length.

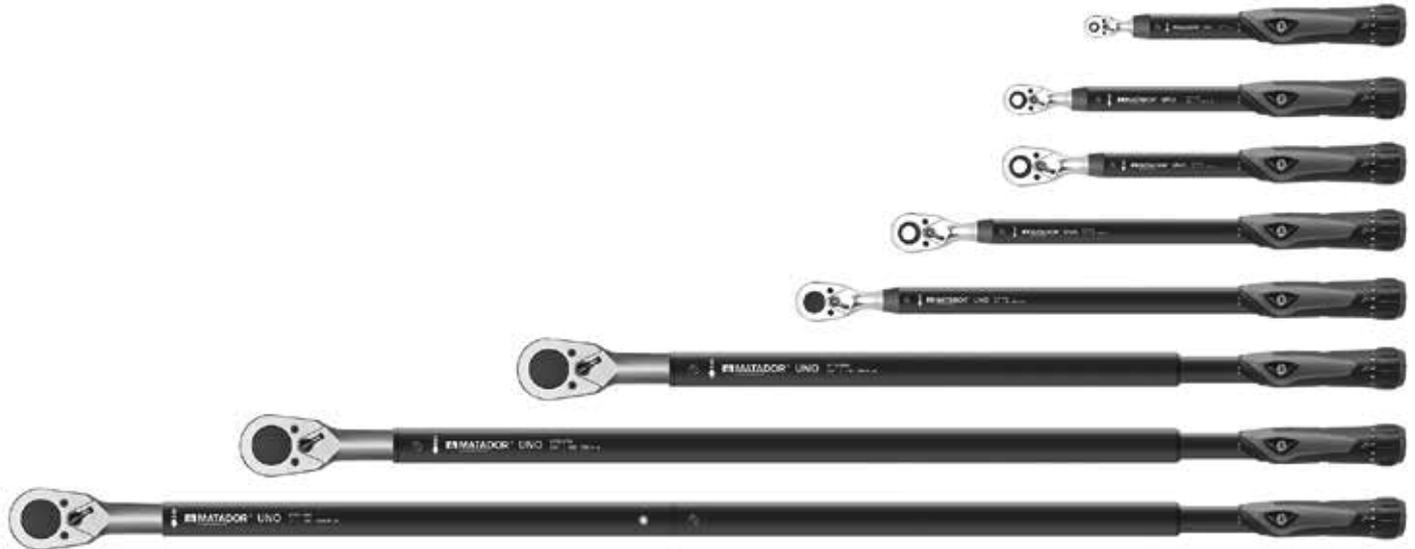

Calibration certificate MATADOR

Overview.

Torque wrenches from 0.1 - 2000 N·m.

Reduction to the essential.

Dial or click type. From 6.3 (1/4") up to 25 (1") square drive.
 With or without angle function. From 5% up to 3% tolerance according to DIN EN ISO 6789. Always with calibration certificate. It is your choice.

MATADOR service. Factory calibration and more in our own laboratory. Traceable to national standards.

What are national standards?

The highest reference level for the calibration of torque tools is the national standard. This standard is the most precise measuring tool used to calibrate other measuring tools.

A national standard is the legally binding basis for a respective physical parameter. In accordance with the international definition this standard represents the lowest possible measurement inaccuracy based on the latest technology.

There is a calibration hierarchy of standards within which the measurement accuracy decreases from level to level. This structure makes it possible to compare test results worldwide and to guarantee traceability to a national standard. In certified companies measuring equipment must be traceable to national standards and has to be recalibrated regularly. This monitoring of measuring devices is a means of quality assurance and ensures uniform and reliable high-quality measuring results.

The MATADOR factory calibration.

All MATADOR torque wrenches are produced to the highest quality standards, adjusted, traceably calibrated and certified. Each tool comes with a factory calibration certificate.

If requested MATADOR torque wrenches are recalibrated within 5-7 workdays at a reasonable price. Also, the tools can be repaired in-house at any time.

DAkkS certificate on request.

For a 100% documentation MATADOR can also provide a calibration certificate according to DAkkS standards in cooperation with an accredited laboratory. Calibration is then directly traceable to the national standard and reaches the highest level of accuracy.

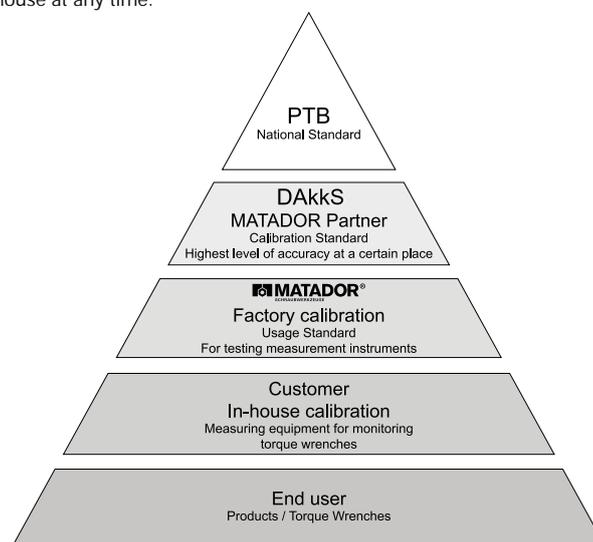

Please feel free to contact us.

What is made during recalibration?

Torque tools are measuring instruments and are subject to natural wear. We thus recommend to have torque wrenches recalibrated at regular intervals (generally once a year) or at least after 5000 load cycles to guarantee long-term precision.

During recalibration in our in-house laboratory the torque wrenches are checked for their proper function and then - according to DIN EN ISO 6789 - tested at 20%, 60% and 100% of the maximum torque.

At any test point 5 measurements are made and documented. If the measured values are within the tolerance a factory calibration certificate is issued. If the measured values do not meet the requested tolerance the torque wrench is adjusted and the test procedure is repeated.

MATADOR Torque Screwdriver.

Little effort - big effect.

Controlled screw tightening in confined spaces.

■ Torque Screwdrivers

- For controlled tightening of screws from 0.1 - 6 N·m
- Manually adjustable to individual target values
- Easily readable micrometer scale
- Accuracy ±5% tolerance from set scale value
- Precise reading accuracy for a minimum of 5,000 tightening cycles
- For controlled tightening in clockwise and anti-clockwise direction
- Clearly palpable and audible torque release
- Ergonomic design of the handle for safe torque transmission
- With square drive for bits according to DIN 3126
- C 6.3, together with adapter also usable for sockets with square drive according to DIN 3124 C 6.3 (not included, art. code 2084 0002)
- With individual serial number for clear product identification
- Including calibration certificate according to DIN EN ISO 6789

Mini torque wrench EasyTorque.

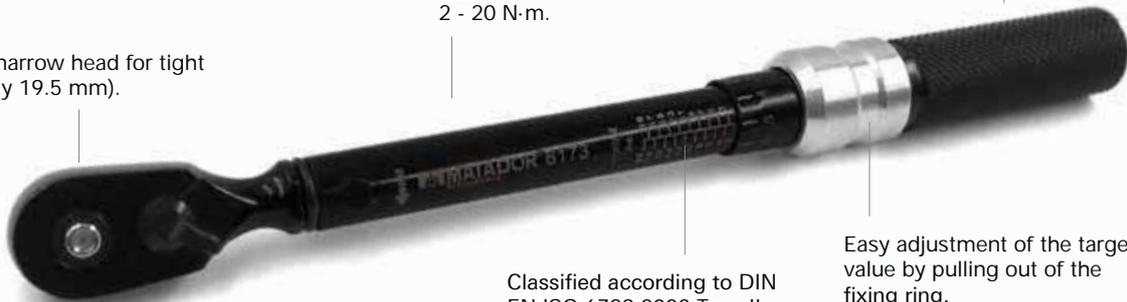

For all fine screw connections in industry and craft.

Black phosphatised metal handle.

±4%
2 - 20 N·m.

Extremely narrow head for tight spaces (only 19.5 mm).

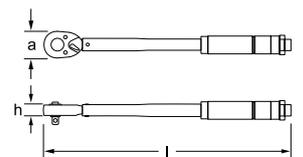

Classified according to DIN EN ISO 6789:2003 Type II Class A with a traceable factory certificate.

Easy adjustment of the target value by pulling out of the fixing ring.

■ Torque Wrench Easy Torque

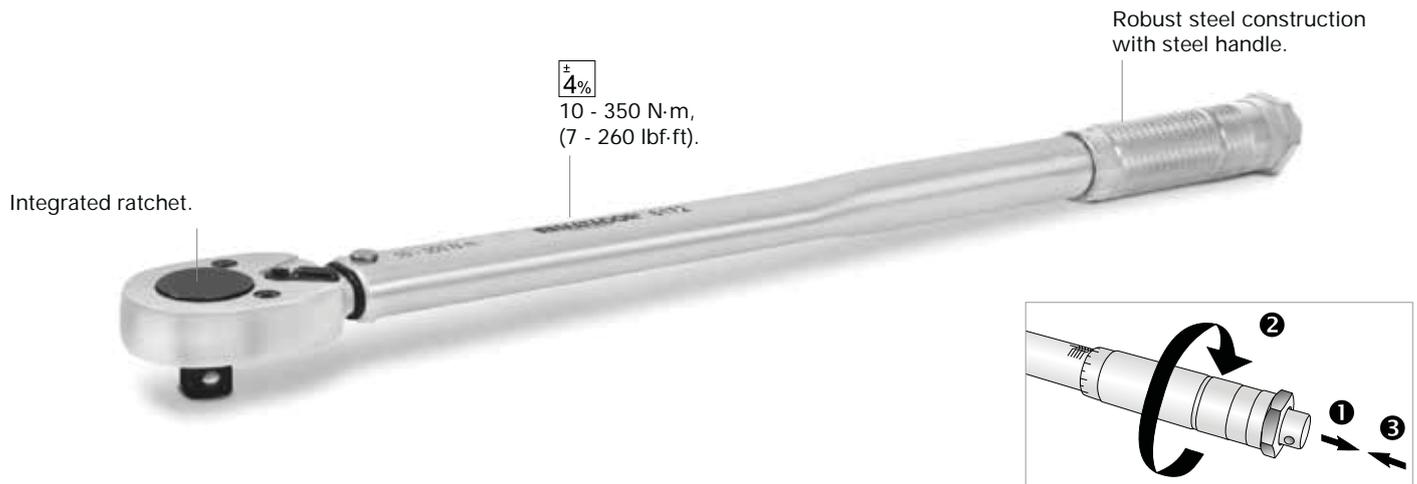

- Releasing torque spanner for precision screw connections
- Triggering accuracy $\pm 4\%$ of the set scale value
- Repeatable and precise with at least 5,000 load changes
- For controlled clockwise and anti-clockwise tightening (therefore not suitable for loosening)
- Fine-toothed with 72 teeth
- Scale with N-m, audible and tactile short-travel release, metal handle and easy locking and unlocking with locking ring
- Permanently legible double scale with steel embossing in N-m with fine adjustment
- Clearly audible release
- With square drive to DIN 3120 - ISO 1174 with ball lock and integrated lever changeover ratchet
- With traceable factory calibration certificate in accordance with DIN EN ISO 6789 In attractive self-service packaging

MATADOR Torque Wrenches ECO. Save your budget.

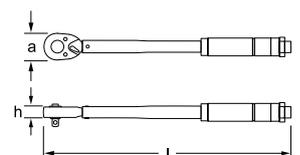

For semi-professional use.

■ Torque Wrenches ECO

- Click type torque wrenches for semi-professional use
- Accuracy $\pm 4\%$ tolerance from the set scale value
- Precise reading accuracy for a minimum of 5000 tightening cycles
- For controlled clockwise and anti-clockwise tightening (thus not for untightening)
- With knurled steel handle for easy adjustment of the desired torque value
- Durable double scale thanks to stamping in N-m and m-kgs with fine adjustment
- Clearly audible release
- With square drive according to DIN 3120 - ISO 1174 with ball stop and integrated lever reversible ratchet
- With individual serial number and calibration certificate according to DIN EN ISO 6789
- In attractive DIY packaging

6175 0015	25 mm 1	190 - 1000	Repair Kit UNO -- 1

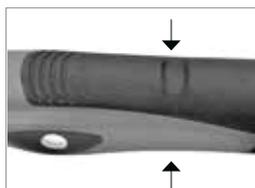

Make complicated things simple.

Easy setting at the end of the handle.

Only one window with clear numeric value in N-m.

Error-free handling thanks to double-sided finger grooves.

Integrated lever ratchet with small head to reach tiny areas.

Well protected in solid plastic case.

Extremely precise and easy to use.

The new professional torque wrench by MATADOR with an **absolutely innovative operating concept**:

Easy setting with extra fine graduation (from 0.5 N·m to 1.0 N·m on larger models), **only one window with clear numeric value in N·m**. No division scale which is difficult to read.

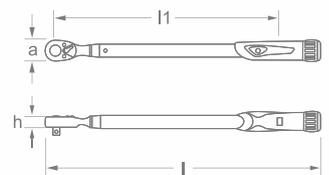

With small ratchet head to reach tiny spaces, with lever and 48 teeth, safety lock and quick-release function. Permanent protection of the body thanks to full powder coating.

The handy and ergonomically optimal design of the handle with its integrated finger grooves make the correct use a breeze. Clearly audible and perceptible signal when the desired torque value is reached.

The MATADOR UNO is extremely precise: **maximum deviation only ±3%** from the set scale value. For controlled clockwise operation. With German calibration certificate according to DIN EN ISO 6789.

From 5 - 1,000 N·m.
For industry and automotive.

Torque Wrenches VDE.

Safety first.

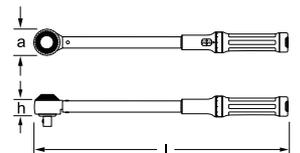

1000 V

■ Torque Wrenches VDE

- Click type torque wrench with reversible ratchet head
- Accuracy $\pm 4\%$ tolerance from the set scale value
- Precise reading accuracy for a minimum of 5000 tightening cycles
- For controlled clockwise and anti-clockwise tightening
- Clearly palpable and audible torque release
- Double scale in N-m and lbf-ft
- Robust ratchet mechanism
- Large vision panel with magnifiers for optimal readability of the set values
- Ergonomic and hand-friendly handle
- Safety lock at the end of the handle
- With square drive according to DIN 3120 - ISO 1174 with ball stop
- With individual serial number and test certificate according to DIN EN ISO 6789

Insert tools for rectangular tool holders. Directly from certified manufacturer.

For rectangular cavities sized 9 x 12 or 14 x 18 mm.

With depth gauges (s_k) for 9 x 12 mm = 17.5 mm, for 14 x 18 mm = 25 mm, other values are marked with *).

Customized insert tools.

MATADOR is first-level supplier of insert tools for numerous leading automobile manufacturers. Also special, extra flat insert ratchets with lever are part of our range.

We would be pleased to submit an individual offer to you based on your special requirements - either as hot formed forging parts, as cast parts or cut on modern CNC machines from solid material.

Please do not hesitate to contact us.

When do you have to calculate?

The calibration of a torque wrench is based on a fixed fulcrum (usually at the same level as the square drive). If the measure of length changes the original lever is no longer valid and the set torque value (M_{xW}) has to be adjusted by a correction factor.

Example:

Correction of the set torque value:

Desired tightening torque $M_A = 180$ N·m:

$$180 \cdot \frac{435}{435 + (62,5 - 25)} = \frac{78.300}{442,5} = 176,95 \text{ N·m}$$

Part No.	Size	Material	Weight	Length	Width	Height	Depth Gauge
818-001	9x12	4x27	0,25	20	17,5	40	17,5
818-002	9x12	14x18	0,30	20	17,5	40	17,5
818-003	14x18	14x18	0,30	25	25	50	25
818-004	14x18	14x18	0,30	25	25	50	25
818-005	14x18	14x18	0,30	25	25	50	25
818-006	14x18	14x18	0,30	25	25	50	25

The correct length is the crucial factor.

Especially when using insert tools the given depth gauge is to be considered. If the depth gauge of the torque wrench (s_k) is equal to the depth gauge of the insert tool (s) the indicated value corresponds to the value of the applied force.

Correction of the torque value.

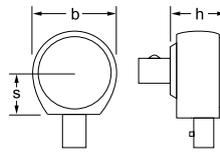

Insert tools with different depth gauges (s) are marked with a * in the respective table.

In these cases and also when using adapters the desired tightening torque (M_A) has to be corrected by the linear factor with the help of the following formula:

$$M_{xW} = \frac{M_A \times l_k}{l_k + (s - s_k)}$$

■ Insert Reversible Ratchets

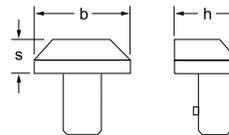

- With pin lock
- Material: Chrome-Vanadium
- Fine-toothed
- Surface: Matt chrome finish
- Max. load of coupler 9 x 12:
6.3 (1/4) = 30 N·m, 10 (3/8) = 135 N·m,
12.5 (1/2) = 150 N·m
- Max. load of coupler 14 x 18:
12.5 (1/2) = 340 N·m, 20 (3/4) = 400 N·m

High Output Torque = Low Input Torque x Revolution.

The function principle of a torque multiplier.

Why use a torque multiplier?

The longer a lever arm the higher the force action. But especially when it comes to industrial screw connections from a certain torque value onwards this basic physical principle is no longer practicable. In case of high torque values it is even no longer possible. For instance, a torque value of 9500 N·m / 7000 lbf·ft cannot be reached with a torque wrench in accordance with the lever rule which says that the distance to the fulcrum determines the rotational effect of the applied force.

Torque multipliers provide a remedy. They substitute the classic lever principle by the physical formula:

$$\text{Torque (Output)} = \text{Torque (Input)} \times \text{Revolution.}$$

It is thus the number of revolutions that determines the output torque, not the length of the lever.

Effective gearing as a standard.

Torque multipliers can be compared to adapters which multiply the applied force (= the input torque) with the help of a gear without having to use long lever arms. The multiplying effect depends on the gear ratio of the gear used.

MATADOR torque multipliers are equipped with high quality ball-bearing precision planetary gears that have an additional overload protection. Thanks to the effective gear ratio the desired output torque is easy to calculate and complicated correction tables are things of the past.

Torque multipliers are very robust and designed for continuous operation under industrial conditions. They should not be missing in any workshop.

Maximum power in the smallest of spaces.

Torque Multipliers are ideal for mobile application thanks to usage without any electronic or pneumatic support.

The main benefits are:

- ✓ Very high power application without long lever arms, use-able in most confined spaces
- ✓ Work with standard workshop torque wrenches, no hidden extra costs
- ✓ Effective gearing, specified gear ratio is the true factor for torque multiplication
- ✓ Lower priced and more variable in use than comparable torque wrenches
- ✓ From 4 500 N·m / 3 300 lbf·ft with anti-wind-up ratchet for safe working

Function example

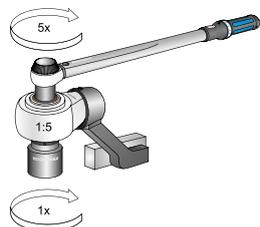

Input torque = 300 N·m / 220 lbf·ft

Gear ratio 1:5

Output torque = 1500 N·m / 1100 lbf·ft

Based on a gear ratio of 1:5, 5 revolutions at the input (with an input torque of 300 N·m / 220 lbf·ft) are required in order to achieve 1500 N·m / 1100 lbf·ft as the output torque.

Input torque and output torque are regarded as constant, the power is only determined by the number of revolutions.

MATADOR Torque Multipliers. The solid compact class.

More power without long levers.

Heavy duty construction with planet gear mechanism with 3 precisely engineered gear stages and hardened gear wheels.

With reaction arm.

1.500 – 2.700 N·m
(1100 - 2,000 lbf·ft).

Including plug-in reaction foot

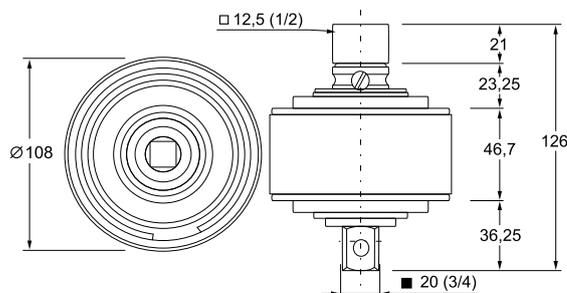

In solid plastic case

■ Torque Multipliers

- Perfect for applications where compact size and weight are critical or for mobile use
- For reducing the effort of applying high torque without electric or pneumatic devices
- Planet gear mechanism with 3 precisely engineered gear stages
- True 5:1 torque multiplication
- Multiplication accuracy according to DIN ISO 6789 / ASME B107.14M-1994 better than ±5%
- Supplied with 2 reaction styles for maximum versatility (reaction bar and plug-in reaction foot)
- In extremely sturdy plastic case

±5%

MATADOR Pneumatic Tools. Powered screw tightening. At a push.

Professionals work with compressed air.

Certainly screws can be tightened or untightened with a simple reversible ratchet. But everybody who had to tighten more than 5-10 screws one after another knows the problem: It is an arduous task.

This work is done much faster and more safely with machine-driven sockets and operating tools.

For industrial application mainly pneumatic tools are used because of their higher performance and compact design. Electric tools are only rarely used in this field.

Compressed air motors have proven themselves as a solution for numerous drive-related requirements. Their solidity and durability as well as only little efforts in terms of assembly, installation and maintenance speak for themselves.

High peak torque and easy tightening.

Impact wrenches operate by a spinning motor that delivers a shock of power to a lug nut. This shock loosens and turns the nut very quickly. The hammer mechanism is designed such that after delivering the impact, the hammer is again allowed to spin freely, and does not stay locked.

This is an advantage which cannot be provided by electrical tools and which is especially helpful for untightening stuck screws.

Thanks to the adjustable torque limitation also during tightening operation power can be applied in a controlled manner.

When used correctly over-twisted screws are a thing of the past. And the final rotation should always be done with a torque wrench.

The MATADOR quality promise.

There are many different kinds of pneumatic tools but often the quality is not very reliable.

MATADOR pneumatic tools do not only provide excellent technical features but also a durable quality designed for industrial use.

We have set-up a range of pneumatic tools that have been tried and tested thoroughly by our technicians and that cover the most important fields of application. True to the motto: Quality before quantity.

The MATADOR service.

MATADOR pneumatic tools are designed for a long life and high reliability – provided that they are handled with the right care.

In case of an unplanned need of repairs or for maintenance reasons our service technicians help you in a quick and unbureaucratic way: In our own workshop in Remscheid we stock an extensive program of spare parts and are able to conduct repairs and maintenance quickly and reasonably priced.

As a standard with each item we provide an exploded drawing and a spare parts list to help you find the suitable parts in case you want to help yourself.

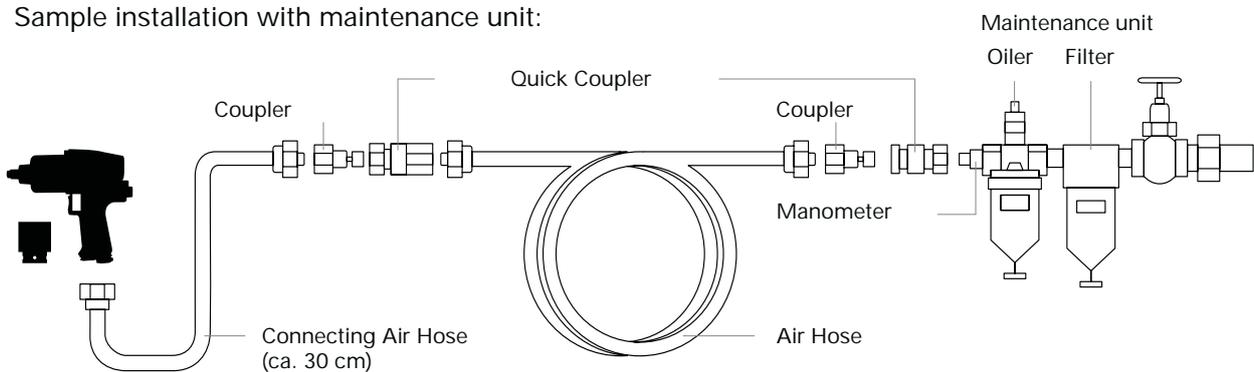

Our service does not end after sales – promise!

Impact technology in a nutshell.

Not only hot air -
with the right care.

Sample installation with maintenance unit:

Air pressure:
6.3 bar (90 psi).

The ideal air
volume.

Right Lubrication is the
most important issue.

Only with
maintenance unit.

The performance of your impact tool depends essentially on the ideal air inlet pressure.

Air inlet pressures that are too high will lead to excessive wear and failure of the tool after a while. Tools operating with too low air pressure are usually lacking in their full performance.

The ideal pressure of the supplied air should be 6.3 bar (90 psi) at the air entrance of the air tool (also when air is flowing). Only with ideal air pressure the impact tool will achieve the technical properties as defined in the respective manual.

To reach the ideal performance of the impact tool the perfect air volume depends on many factors:

The maximum air consumption values for the relevant impact tool (l/min or CFM), the recommended hose sizes (inner diameter), the maximum flow rates of the maintenance unit and the effective capacity of the compressor must be balanced.

The recommended hose size is indicated in the MATADOR manuals and catalogues.

As a rough guide please use:

		
l/min	CFM	mm
100-190	4-6	6-9
195-300	7-10	13

The consequent lubrication of air motors is absolutely required to maintain full performance of the motor, to prolong the life time of the motor and to prevent corrosion.

If you don't use a maintenance unit or an additional oiler, the impact tool should be lubricated manually every day before use.

In this case decouple the impact tool from the quick coupler and trickle approx. 5 ml of a suitable air motor oil into the hose. As a rough guide use 1-2 drops of oil per cubic meter compressed air.

After this reconnect the impact tool with the air supply and run the motor for a few seconds at a slow rate in order to homogeneously distribute the oil in the drive.

The reliability and durability of an impact tool can significantly be improved by the assembly of a maintenance unit.

MATADOR recommends to install a maintenance unit on each workplace consisting of manometer, lubricator and water separator.

The water separators and filters which are integrated in our maintenance units avoid corrosion in air motors and supply clean air. A high content of water in the compressed air will lead to rust inside which means air pressure losses and a lack of performance of the air tools.

If no filters are used, rust and particles will damage or block the motor.

Still working when others have long given up. MATADOR Impact Wrenches with composite housing. Maximum performance at low weight.

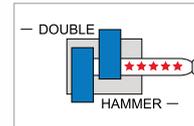

Ultra light composite housing.

High performance Twin Hammer Clutch Mechanism with 2 anvils with a newly developed Twin Line driver to create an enormous breakaway torque already within the first rotations of the engine.

With one-hand switchover.

Non-slip handle.

Extremely low air consumption, e.g. only 113 l/min with 12.5 (1/2") drive.

Exhaust air guided downwards through the handle.

The Double Hammer principle. Superior technique for heavy duty application.

High-performance Twin Hammer Clutch Mechanism

One-hand forward/reverse shift through practical push button

What really matters.

Five factors determine the performance of impact wrenches. We at MATADOR have attached great importance to these:

- High loosening torque (so that fixed screw joints can be loosened powerfully)
- Constant, reliable impact through twin hammer clutch mechanisms
- Low weight for less fatiguing operation, in best case through composite housing
- Low air consumption
- Low-maintenance and robust construction

MATADOR impact wrenches use only top class twin hammer clutch mechanisms, also in (3/4") and 25 (1") class tools. Compared to simple pin clutch mechanisms these twin clutch hammers are more robust, consist of only few single parts (i.e. less wear parts) and provide a reliable, constant impact with icontinuous torque progression.

Superior quality at a reasonable price.

■ Compressed Air 3-way Separator

- Connection of 3 departure directions
- Material: Brass

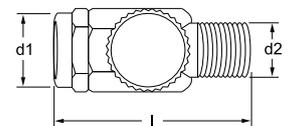

Art. Code	"	mm	d mm	l mm	g	
7005 0701	1/4	19	41	32	160	1

■ Compressed Air Regulator

- For regulating the air flow volume
- With regulation wheel
- Assembly directly in the access direction
- Completely lockable
- Spanner size: 18 mm
- Max. 14.5 bar

- Material: Brass

Art. Code	d1 "	d2 "	mm	l mm	g	
7005 0801	1/4	1/4	18	43	80	1

■ Padded ear defenders

- According to CE / EN 352-1
- With adjustable and padded ear shells for comfortable wear
- Ear shells with stepless fast adjustment
- Sound level reduction: 25 dB(A)

			
Art. Code		g	
7100 0001		200	1

■ Micro fine woven gloves

- According to CE / EN 420 / 388
- Very comfortable design and fit
- Especially breathable fabric
- With PU reinforced gripping palm
- Ideal for working with small parts
- Silicone-free, also suitable for allergy sufferer
- 12 pair / box

			
Art. Code		g

7110 0002	XL 9	20	1
7110 0003	XXL 10	25	1

■ Protecting Glasses

- Clear glasses
- With UV protection
- Sportive design
- Extremely substantial frame
- Polycarbonate lens

			
Art. Code		g	
7120 0001		30	1

MATADOR Impact Tools. For quick and safe application. For machine-operated use.

Made of Chrome-Molybdenum special steel for high resilience and minimal wear.

Manganese phosphated surface for high level of corrosion protection.

With end-to-end hole for the safety pin and with groove for the safety ring according to DIN 3129.

According to international standards: DIN 3129, ISO 2725-2, BS 7794, AMSE B107.2.

With MATADOR SmartDrive² Profile: Optimized traction. Better torque transmission. Better protection of tool and screw.

Never confuse hand operation and machine operation.

Sockets are distinguished according to their way of operation, i.e. hand operation or machine operation.

Sockets for hand operation are not suitable for the use with electric or air tools whereas impact sockets can also be used in hand-operation (e.g. for controlled tightening with the help of a torque wrench).

We repeatedly receive claims because sockets that are only suitable for hand-operation were instead used with impact wrenches. As a result they cracked.

Sockets that are suitable for machine operation are made of a special high-performance steel, are thick-walled and coated in another way than standard sockets.

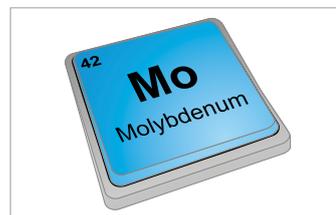

More strength through Molybdenum alloy.

Through adding Molybdenum impact sockets reach a higher yield strength and solidity than standard sockets made of Chrome Vanadium steel. Also Molybdenum increases the corrosion resistance of the tools.

Impact sockets for machine operation must not be nickel-plated and chrome-plated like hand-operated sockets. As they are exposed to considerable force chrome can peel off and cause injuries.

In a special treatment process MATADOR impact sockets are thus manganese phosphated. The manganese surface acts as a protective shield. It reduces wear of the tools and thus increases their durability.

Superior surface thanks to manganese phosphating.

For surface treatment MATADOR uses a special manganese phosphate solution. Together with Chrome-Molybdenum it causes a chemical reaction during which it covers the surface of the metal. During this process a protective coating is created.

The phosphate coating protects the metal against abrasion and heat and as a result reduces the wear of the tools. Even if exposed to heavy load the phosphate coating remains.

Impact sockets with manganese phosphated surface are can longer be used and are more durable than uncoated tools or tools that are only black-finished (i.e. simply colored).

MATADOR impact sockets. Quality in detail.

The correct use of impact sockets.

According to DIN 3129 impact sockets must have a hole for the safety pin and a groove for the safety ring. A simple ball lock is not sufficient and is not permissible.

During machine operation heavy forces can occur. Without proper security operating tool and socket can easily separate and cause considerable damage.

For this reason MATADOR impact sockets do not have ball lock but have to be secured with pin and ring according to DIN 3129.

The correct size of the safety pin and safety ring depends on the size of the square drive of the socket. At the end of each tool segment you will find the suitable pins and rings.

To apply safety pin and ring is really easy and not at all time-consuming:

Simply connect socket and operating tool, insert the pin and secure with the ring.

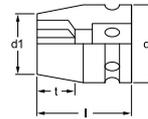

Done. For your safety.

■ Impact Sockets

- Suitable for all standard electric and air tools
- With square drive as per DIN 3121 - G 12.5 / ISO 1174
- Suitable for hexagon head screws
- With 6-point profile
- With MATADOR SmartDrive Profile

- Standards: DIN 3129 / ISO 2725-2
- Material: Chrome-Molybdenum
- Finish: black phosphated

Impact Screwdriver Bit Sockets (TORX®)

- Suitable for all standard electric and air tools
- With square drive as per DIN 3121 - G 20 / ISO 1174
- Suitable for recessed TORX® head screws
- Material: Chrome-Molybdenum
- Finish: black phosphated

Impact Screwdriver Bit Sockets (Hexagon)

- Suitable for all standard electric and air tools
- With square drive as per DIN 3121 - G 20 / ISO 1174
- Suitable for in-hex screws
- With 6-point profile
- With MATADOR SmartDrive Profile
- Standards: DIN 3129 / ISO 2725-2
- Material: Chrome-Molybdenum
- Finish: black phosphated

The MATADOR pliers.

Simply innovative.

2-component sleeves are more than 2 colors.

Comprehensive research into the gripping characteristics and flow of movement when working with pliers have shown that the use of different materials can considerably relieve the muscles in the hand.

MATADOR 2-component handles thus consist of hard and soft plastic materials making it possible to work without fatigue to a large extend.

The blue, hard component allows a forceful and quick gripping with low friction. The black soft TPE component by contrast has an anti-slip effect and allows powerful working.

Innovative functions in the details:

Integrated ring spanner

Aggressive design

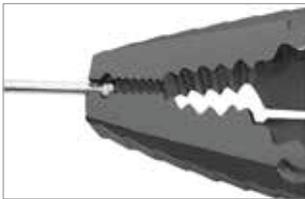

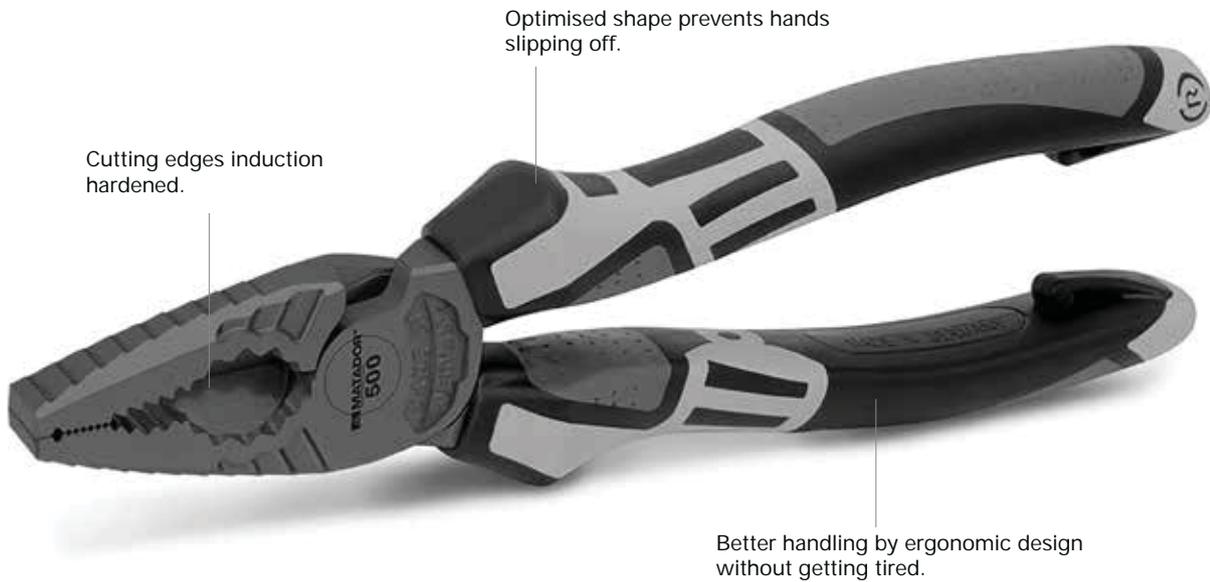

Combination of useful features

Keep it short and simple:
The pliers pictograms.

Practical nailholder

Grip zone for flat and round material

Grip zone for round material

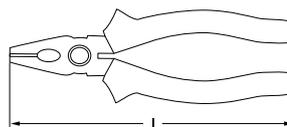

Induction hardened cutting edges for soft, hard and piano-wires

■ Heavy Duty Combination Pliers

- American pattern
 - For cutting hard and soft wires
 - Cutting edges inductively hardened
 - Asymmetric inside jaws for better grip on the workpiece
 - Gripping zones for flat and round materials
 - With Nail- & wire holder
 - Integrated ring spanner
 - Power transmission with optimum leverage for easy and effortless work
 - With ergonomically shaped 2-component sleeves
- Standards: DIN ISO 5746
 - Material: Tool steel
 - Surface: Matt chrome finish

Cutting pliers.

Side Cutters

- For cutting hard and soft wires
- Precision cutting edge for the finest wires
- Cutting edges inductively hardened
- Cutting edge hardness approx 62 HRC
- Power transmission with optimum leverage for easy and effortless work
- With ergonomically shaped 2-component sleeves

- Standards: DIN ISO 5749
- Material: Special tool steel
- Surface: Matt chrome finish

Special pliers for Electrician's and electronics.

■ Electrician's Side Cutter „4 in 1“

2K

- Integrates all 4 functions: cutting - stripping - crimping - bending into one tool
- With ergonomically shaped 2-component sleeves
- With stripping function for single and multi-stranded conductors with 1.5 mm² and 2.5 mm² conductor cross-section
- Precision cutting edge for the finest wires
- Power transmission with optimum leverage for easy and effortless work
- Material: Special tool steel
- Surface: Matt chrome finish

Water Pump Pliers.

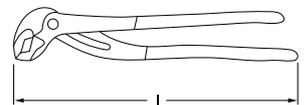

Water Pump Pliers

- The indestructible water pump pliers, with safety box joint for highest stress
- Gripping capacity 40% above ISO by means of arch-shaped pitch adjustment
- Optimum jaw geometry with self-locking serration
- Cogs additionally induction hardened
- Box joint with wide guide surfaces

- Ideal fulcrum, minimum effort
- Coated handles
- Standards: DIN ISO 8976
- Material: Chrome Vanadium steel

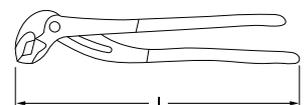

Art. Code	l mm	l"	mm	mm	g
0556 0180	180	7	40	1.1/4	155
0556 0240	240	9.1/2	50	2.1/4	350

Water Pump Pliers PRO

- With automatic precise adjustment
- Compact, narrow shape for working in smallest spaces in positions otherwise inaccessible
- With nail and wire holder
- Gripping capacity 40% above ISO by means of arch-shaped pitch adjustment
- Optimum jaw geometry with self-locking serration
- Cogs additionally induction hardened
- Box joint with wide guide surfaces

- Remains locked even after opening the pliers
- Fast adaption of the work piece thanks to innovative ratchet adjustment
- Coated handles
- Standards: DIN ISO 8976
- Material: Chrome Vanadium steel

Circlip Pliers.

For assembly from circlips.

Drop-forged precision tips, almost unbreakable, anti-slip.

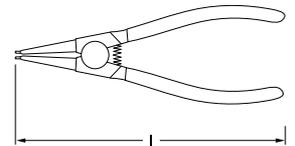

Ø 3 - 140 mm

■ Circlip Pliers (A)

- For fitting external circlips on shafts according to DIN 471 and DIN 983
- Forged
- With straight jaws and opening spring
- Anti-slip, twisted precision tips
- Coated handles

- Standards: DIN ISO 5254-A
- Material: Chrome Vanadium steel

Grip Pliers.

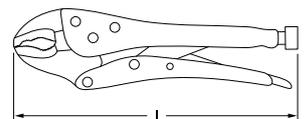

For secure gripping, clamping and holding.

■ Universal Grip Pliers

- For securely holding, clamping and tensioning round, profile and/or flat material
- With wire cutter
- High clamping pressure due to toggle lever transmission
- Usable with one hand
- With quick-release and adjusting screw

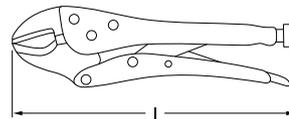

- Material: CV spring steel
- Surface: Nickel plated

-----	------------------------

Classic L-Key Wrenches for quick mounting.

Short or long pattern. With or without ballpoint. Single keys or key sets.

The screwdrivers for socket head screws.

Socket head screws with hexagon socket or TORX[®] profile belong to the most used screw connections in special engineering and furniture industry.

The fitting L-Key Wrenches are reasonably priced and compact in their dimensions and must not be missing in any tools set. Due to the fact that nothing is more nerve-stretching than the search for a single allen key in a tool box, practical assortments have established:

Single key or key set. It's your choice.

The ring for short type L-Key Wrenches holds the keys together but single keys can easily be taken out.

Besides the clear tool arrangement the metal holder has the advantage that different working positions are possible and that the lever can be prolonged for increased force action.

In the classic slide box the allen key are arranged clearly and stored practically dust-free.

Completely new is the MATADOR softGRIP holder: Its soft material makes it possible to quickly take out the required size. Thanks to its ergonomic design the holder is also perfectly suitable for quick action as the keys can also be used without being taken out.

Professional quality for enduring success.

Even though L-Key Wrenches are relatively simple tools there are some critical quality features that determine the lifetime and service-ability of the keys:

Since many years MATADOR uses a special Chrome Vanadium alloy for L-Key Wrenches in order to realize higher tightening or loosening torques.

Fully automatic CNC machines guarantee tight tolerances and go easy on the screw head. All edges are chamfered so that the L-Key Wrenches can more easily be inserted into the screw head. This is especially advantageous in case of worn out screws.

Proven production technologie.

The L-Key Wrenches are Fully hardened and instead of a simple laser marking they are provided with a durable stamping from the size of 3 mm.

The final full-galvanic treatment during which the L-Key Wrenches are nickel-plated and chrome-plated ensures a long-lasting corrosion protection.

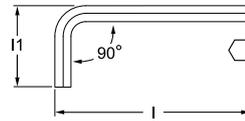

Chamfered edges for easy inserting into the screw head

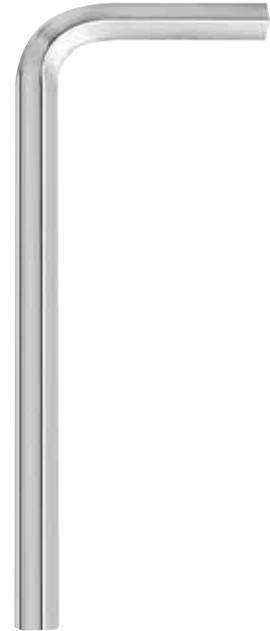

L-Key Wrenches (Hexagon)

- L-Key Wrenches for inside hexagon socket screws, short type
- Fully hardened
- Standards: Similar to ISO 2936 (DIN 911)
- Material: Chrome Vanadium

- Surface: Matt chrome finish

MATADOR 2-Component Screwdrivers. Spare the hand for powerful screwing. Especially ergonomic design for effortless working.

Burnished tip for precise, durable fitting into the screw.

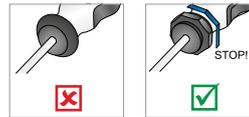

Soft and anti-slip grey grip zone made of TPE plastic for secure hold with maximum pressure.

Hard, black turning zone made of special plastic for quick working with low friction.

Chrome-plated blades made of high-alloyed special steel for optimal corrosion protection.

Protection from slipping and rolling away through hex design.

With spheric handle end for comfortable support when high torques are applied.

2-component handles are more than 2 colors.

Comprehensive research into the gripping characteristics and flow of movement when working with screwdrivers have shown that the use of different materials can considerably relieve the muscles in the hand.

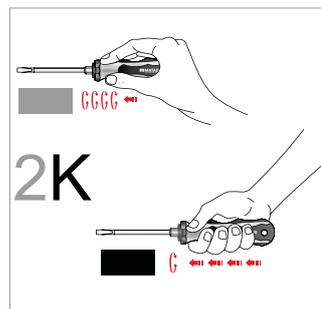

MATADOR 2-component handles thus consist of hard and soft plastic materials making it possible to work without fatigue to a large extend.

The special plastic material of the black movement component offers a variety of advantages: It is highly impact-resistant, splinterproof, insulating, resistant to oil and solvents, heat-resistant and flame-resistant. Moreover it has a low weight and is suitable for use within a wide temperature range (-35°C up to +70°C).

For quick and forceful tightening.

The hard component allows a forceful and quick tightening with low friction. Thanks to the bigger diameter of the hard component the screwdriver can be turned in the hand like a wheel.

The soft TPE component by contrast has an anti-slip effect and allows powerful working.

Clear marking and practical details.

All MATADOR 2C screwdrivers have an additional identification of the tool profile at the handle end, so that the required screwdriver can quickly be found in the tool box.

The borehole at the handle end allows the insertion of a sliding bar for loosening seized screws or can be used as hanging hole to improve tool order at the tools panel.

The shape follows the human hand.

The spheric shape of the MATADOR 2-component handles has been designed in such a way that the human hand can encompass the handle optimally.

With that the hand's force is spread over a maximum contact surface so that pressure points can be avoided and an optimal transfer of forces is ensured.

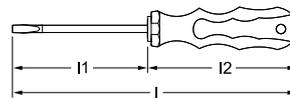

Ergonomics you can touch!

Reversible Screwdrivers by MATADOR.

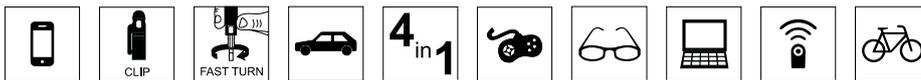

Handy helpers to go.

4 penny

Reversible bits made of tool steel.

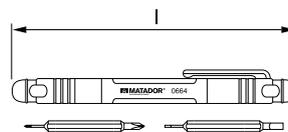

Practical shirt clip.

■ Mini-Screwdriver 4in1

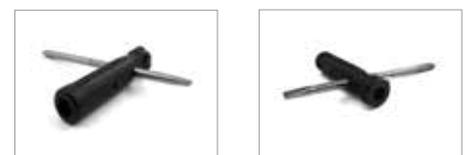

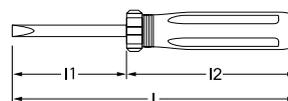

- Exceptionally practical pen screwdriver
- With 2 removable caps, each with a removable bit
- 4 screwdrivers in one tool
- Provides window for quick identification of the inserted bit
- A perfect combination of precise technology and standard screwdriver
- Suitable for glasses, mobile phones, remote controls, computers, toys, bicycles, cars and all kinds of repair in general
- Blade made of tool steel

Art. Code	mm		l mm	g

MATADOR Hammers.

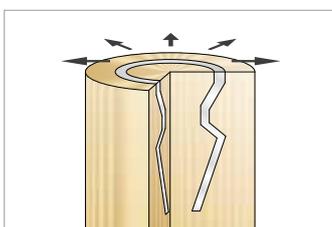

Safe, ergonomically designed and convenient.
Strike by strike.

Secure fitting of handle and hammer head.

On principle MATADOR hammer handles are fitted to the hammer head by a ring wedge.

Other than a flat wedge the ring wedge presses the handle wood evenly to all sides to the eye of the hammer head and thus allows a tight fit. The integrated barbed hook makes sure that the hammer head does not become loose unintentionally even after several hundreds of blows.

Controlled hardness and perfect cut.

Hammers have to have the „right“ hardness. According to DIN 1193 the hardness at the face (the flat end) and pein has to be 50 - 58 HRC. This value makes sure that the hammer is not too hard to avoid splintering when in use. On the other hand the head must not be too soft as buckles and beads at the face would occur.

Moreover DIN 1193 defines the cut of the two hammer ends: the face has to be chamfered all-round. The pein should be evenly blunt and chamfered at the sides.

MATADOR hammers are ground fully automatically on state-of-the-art machines and thus ensure a perfect protection from splintering even under heavy stress.

Only certified wood.

The right wood for striking tools is regulated under DIN 68340. Preferred wood types are hickory and ash. For our hammers with wooden handle we only use ash or hickory wood from controlled cultivation.

Ash is the most common wood type used for quality hammers. Ash is relatively inexpensive break resistant to a large extent short-fibered in structure.

In case of breakage the ash handle breaks in two parts because at the break line the wood cannot be held together.

Hickory, on the contrary, has longer fibers and is thus 3 to 4 times steadier and more elastic (= more stress-resistant) than ash. However, it is also more expensive.

Safety Instructions.

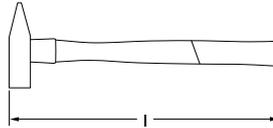

- Always wear eye protection goggles and protective gloves.
- For optimal impact the position for your hands on the handle should be as far as possible away from the hammer head.
- Always keep the hammer handle free from lubricants.
- Never misuse a hammer as a lever.
- Only use the work faces of a hammer. Never use the sides.
- Do not store hammers with wooden handles in a warm and dry environment. The hammer might lose moisture and shrink. Before using the hammer please check that the hammer head is tightly and securely fitting to the shaft.
- Never use steel hammers to work on workpieces with a hardness exceeding 46 HRC. For this purpose use MATADOR plastic hammers or non-rebound hammers.

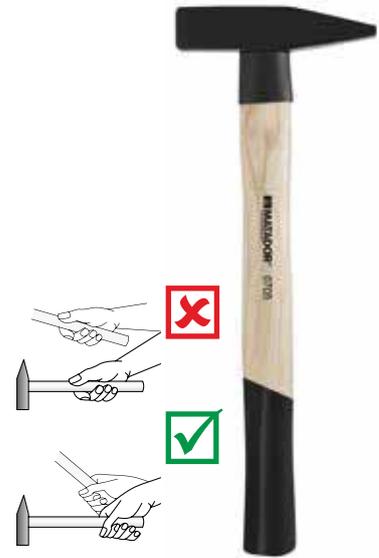

■ Engineer's Hammers

- German pattern
- Forged hammer head
- Induction hardened
- Sideways smoothed and epoxy powdered
- Handle fixed with round steel wedge and resin
- With safety collar (tapered)

- Standards: DIN 1041 / handle DIN 5111
- Material: Head C 45, handle ash
- Surface: Black painted hand end

MATADOR Striking Tools.

Hot forged and hardened as a whole.

Tried and tested industrial quality for long service life.

It goes without saying that MATADOR striking tools comply with the DIN standards with respect to their form and workmanship.

Chisels, center punches, drift punches and parallel pin punches are made of a special chrome vanadium air hardening steel. All striking tools are entirely quenched and tempered and thus resist hard working stress and guarantee an especially long service life.

Thanks to the additional inductive hardening of the striking head to 35 - 46 HRC no splintering and beading will occur.

Even in hard industrial working stress MATADOR striking tools will not break.

In case of low wear: Regrinding.

Dulled edges can be reground several times. Make sure that grinding intervals are short and avoid excessive grinding heat in order not to impair the hardness (ideal: water cooling).

In case of heavy wear: Reforging.

In case of heavy wear and tear the cutting edges can be reformed at any time: Pay attention to the right heating of the forging range (cutting edge + 30 mm) up to 950 - 1050°C. The optimal hardening temperature is 790 - 880°C, then immediately quench in oil and heat up to a temperature of approx. 280°C. Ready.

Safety Instructions.

The following working safety requirements should be strictly observed due to high risk of injury involved in the improper use of hand striking tools:

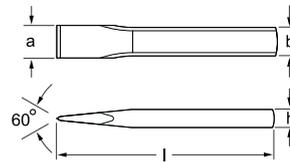

- Always wear eye protection goggles.
- Select the right striking tool and the appropriate hammer size depending to the application.
- Avoid working on hardened material exceeding 40 HRC due to the risk of being seriously injured through splintering.
- Avoid the striking head to be soiled by lubricants.
- Remove burrs at the striking head regularly through grinding.
- Check the cutting edge of the tool before starting to work. Worn cutting edges have to be reground.
- Only use striking tools for their intended purpose.

Flat Cold Chisels

- For general and coarse chiselling work at brickwork, concrete or massive stone
- With regrindable cutting edge
- Through-hardened cutting edge
- Standard: DIN 6453
- Material: Special chrome vanadium air hardening steel

- Surface: Black lacquered

MATADOR Parallel Pin Punches PRO.

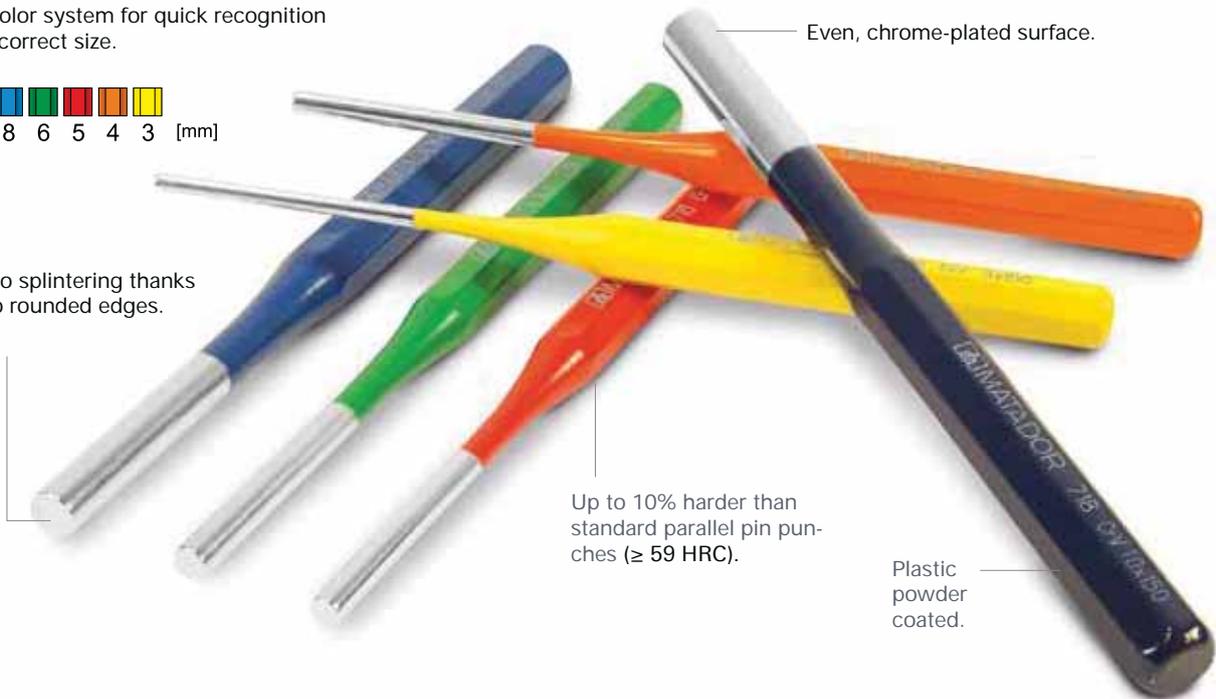

The next level of hardness and durability.

Extremely hard. Secure disassembly with highest precision.

With color system for quick recognition of the correct size.

No splintering thanks to rounded edges.

Up to 10% harder than standard parallel pin punches (≥ 59 HRC).

Plastic powder coated.

More than meets the eye: Additional hardness.

Underneath their coating MATADOR parallel pin punches come out in their true colors.

Made from high-alloyed tool steel and entirely hardened they are especially suitable for continuous industrial use.

Through the tempered striking head and a hardness of around 59 HRC you can work with MATADOR parallel pin punches in application fields where standard parallel pin punches have long given up. Test yourself!

Rounded edges for increased safety.

All edges of MATADOR parallel pin punches are rounded fully automatically. Splintering and burr at the tip are almost entirely avoided.

This does not only save the work piece but also minimizes the risk of injury for the user. Even if the tools are overstressed they deform elastically and plastically. They do not suddenly break.

Improved surface.

Compared to many competitive products MATADOR parallel pin punches have a grinded, polished and chrome-plated surface.

This results in a low surface roughness which has the following advantages:

- low susceptibility to corrosion
- parallel pin punches can hardly get jammed in the drill hole
- extended service life and elasticity
- hardly any predetermined breaking points as surface notches are evened out

Why PRO?

All MATADOR striking tools are made of special air hardening steel that – after heating to 850 °C – hardens in still air.

The PRO series additionally has a tempered striking head and a chrome-plated and plastic powder coated surface. Thanks to color guidance system the different sizes can easily be recognized.

By the way, all parallel pin punches are produced with minus tolerances and thus jamming in the drill hole is avoided.

Parallel Pin Punches PRO

- All important parallel pin punches PRO in in practical folding metal box
- With ground and polished surface
- With rounded edges
- Through-hardened cutting edge

The MATADOR pullers.

Solid quality, tried and tested.

The basics of right pulling:

Check the condition of your tools at regular intervals and replace any damaged or worn parts.

Keep the threads of all spindles and heads clean and well oiled.

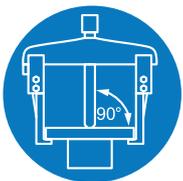

Before you start work, acquaint yourself with the proper use of the tool and pay attention to pertinent safety measures.

If anything at all is unclear pls. call the MATADOR helpline.

Prior to starting work make sure that the pulling tool is in good condition.

Double-check the tool for correct mounting and monitor the forces incidental to the pulling process.

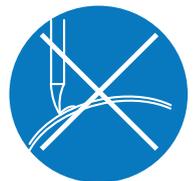

Never violate the maximum load data prescribed for the tool and use a torque wrench to keep tabs on the applied forces

Always wear suitable personal protective equipment and safety glasses.

Never use extensions to increase the applied torque.

Never alter a pulling tool or related product in any way.

Cutting soft materials. For example with the MATADOR universal knife.

For a clean cut.

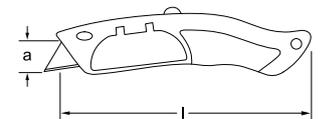

■ Universal knife PRO

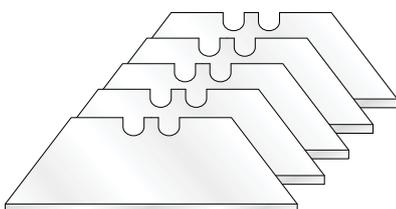

- Universal knife for 18 mm blades
- Aluminum die-cast housing with non-slip grip
- Heavy duty version
- With safety blade and automatic blade feed
- Blade pushed out to 20 mm

- Includes 10 replacement blades in the magazine

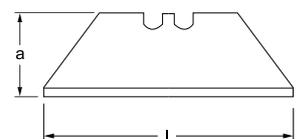

Art. Code	l mm	a mm	g	
0828 0001	170	18	200	5

■ Spare blades

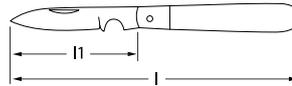

- 10 spare blades
- Chrome-alloyed steel

Art. Code	l mm	a mm	g	
0828 0002	62	18	20	5

■ Cable Knife with wooden handle

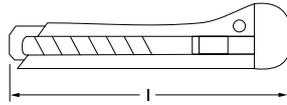

- The classic cable diameter for each tool assortment
- Blade folds away
- With straight, hardened blade
- With round cable scraper
- Moulded handle made out of wood
- Material: Stainless steel

Art. Code	l mm	l1 mm	g	
0825 0001	200	90	85	10

■ Universal knife ALU

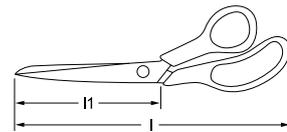

- For right handed use
- With reinforcement eyelet
- Blade 18 x 100 mm
- With 0,5 mm strong snap off blades
- Blade guide out of metal
- Housing made out of aluminium

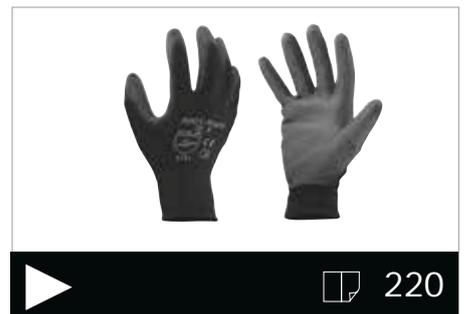

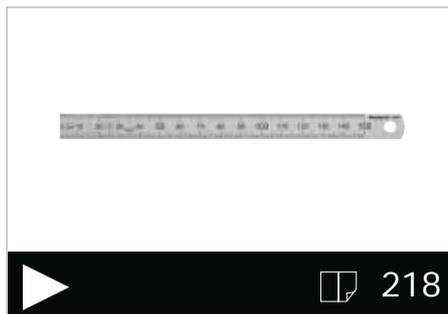

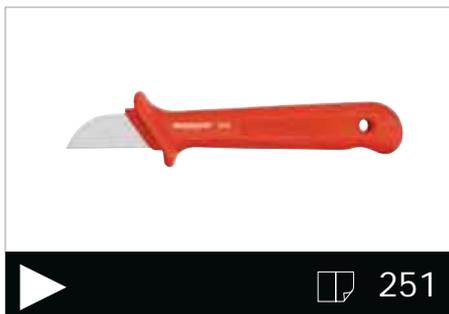

Art. Code	l mm	g	
0827 0001	140	89	5

■ Household Scissors

- For many applications
- Re-adjustable screw-joint

Art. Code	l mm	l1 mm	g	
0743 0001	205	65	80	6

Cutting hard materials. Snips and tin snips. For a clean cut.

What does it mean: left or right cutting?

Snips are suitable to cut thin and not too tough steel plates. Hand snips are forged in one piece. However leverage snips consist of forged head and one handle made of high strength steel.

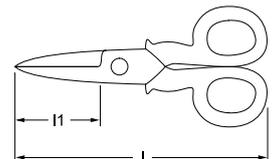

Matador's snips 745 and 747 are designed and sharpened with variable cutting edges depends on the radius:

-  Left cutting snips are designed for cutting radii from right to left.
-  Right cutting snips are designed for cutting radii from left to right.

■ Telephone and Cable Scissors

- With serrated cutting edges
- With wire cutter
- Re-adjustable screw-joint
- Straight cutting edges, polished jaw
- Made of high quality steel

				
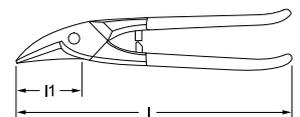

Art. Code	l mm	l1 mm	g	
0744 0001	140	50	115	6

■ Dulf Ideal Tin Snips

- For short, straight and figure cuts, large radius
- Cutting edges induction hardened
- Temper of cutting-edges 57 - 59° HRC
- Re-adjustable screw-joint
- Material: Tool steel, drop-forged
- Execution: Oil-hardened

								
Art. Code	mm	mm	l mm	l"	l1 mm	g		
0745 0001	R	1,5	1,0	250	9.3/4	42	540	6
0745 0002	L	1,5	1,0	250	9.3/4	42	540	6

Lever-assisted Tin Snips for optimum results. Cuts through sheet steel so easily.

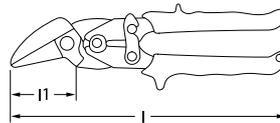

■ Ideal Lever Tin Snips

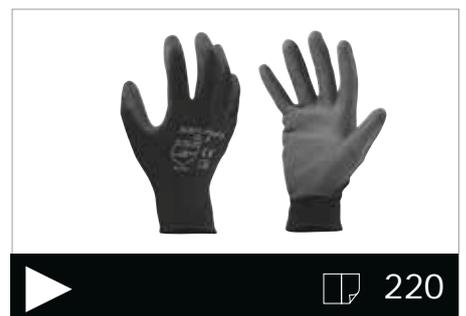

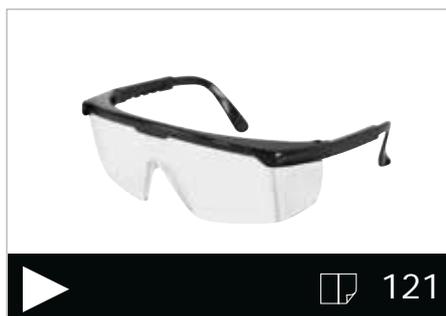

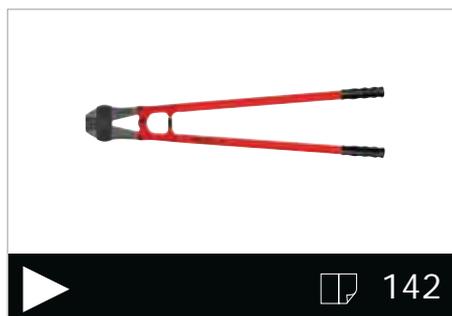

- For short, straight and figure cuts with large radius
- Micro-serrated cutting edge, prevents slipping off during cutting
- Cutting edge hardness 60 - 62 HRC
- Special cutting geometry and precision cutting for a clean cut without any burrs
- With selfopening spring with lock
- With optimum leverage for easy and effortless work

- Re-adjustable screw-joint
- Ergonomically designed multi-component safety handle for better handling
- Handles made of solid rolled steel
- Made of tool steel, forged, oil-hardened

Art. Code		Fe	VA	l mm	l"	l1 mm	g	
0747 0001	R	1,8	1,2	250	9.3/4	30	515	6

If cutting does not help: Sawing.

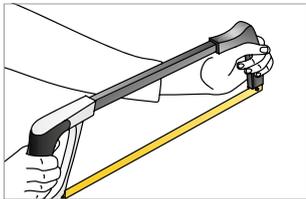

For an accurate, burr-free sawing.

Ergonomic,
both sides rubberized
handle.

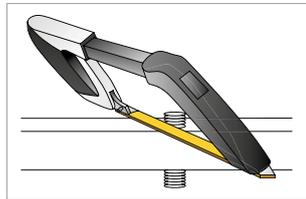

Easy sheet changes
due to quick-apparatus.

With high performance saw
blade bi-metal HSS DMo5.

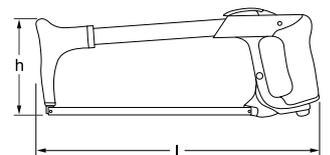

Ideal for two-hands operation

Alternative 55°-blade alignment for a
flush sawing of pins etc.

■ Hacksaw

- High blade tension of 100 kg for straight, clean cuts with precise joints.
- Lightweight aluminum frame with steel core for easy handling
- Alternative blade tension at 55 ° for flush cutting.
- In the grip integrated clamping mechanism HSS DMo5

Art. Code	l mm	h mm	g	
0786 0002	440	140	750	5

High performance saw blades HSS DMo5

- From High Speed Steel with Surface special treatment (steam tempered)
- For cutting of metals and alloys to 800N/mm², dental hard
- 24 teeth per inch, for excellent cutting results
- Combines high performance with security breach
- Material: Bi-metal HSS DMo5

	Art. Code	l mm	l "	g

MATADOR Scraper. Extremely sharp.

At the disposal of residues on smooth Surfaces.

What are scraper?

A scraper is a tool with minimum one cutting edge to scrape.

Scrapers are used to smooth metal surfaces in hundredths of a millimetre in the metal sector. The most common form is the triangular and blunt scraper.

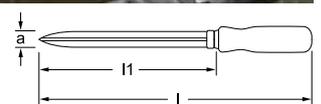

Gasket scraper used for disposal of residues on cylinder heads, valve covers and flat scrapers.

Glass scraper consists of extreme sharp blades. They are useful to remove labels, adhesive residues on surfaces of glass without causing scratches.

■ Three-Edged Hollow Ground Scraper

- Working ends polished
- Flanged blade made of Chrome Vanadium steel
- With lacquered wooden handle
- Standard: DIN 8350 Form B
- Material: Chrome Vanadium

Everything for thread repair.

Drill. Cut. Sink.

■ Twist drill assortment

19

★★★★
HSS-G

- Assortment with 19 high-performance twist drills
- For alloyed and unalloyed steel up to 900 N/mm², aluminum etc.
- Right hand cutting
- From Ø 3.0 mm split point according to DIN 1412 C
- Spiral angle: 20 - 30 °
- Tolerance on Ø: h8
- Standard: DIN 338

Art. Code	g	
0762 9191	673	1
0762 Ø 1,0 – 10,0 mm x 0,5 mm increasing		

■ Step drill assortment

3

- 3-piece step drill set in sturdy plastic case
- Straight fluted
- 4-12mm, (drilling steps 1mm increasing)
- 4-20mm and 6-30mm, (drilling steps 2mm increasing)
- For burr-free drilling and driving of sheet metal, tubes and profiles

Art. Code	g	
0767 0001	155	1
0767 Ø 4-12 - 4-20 - 6-30 mm		

■ Countersink assortment

6

- Assortment with 6 powerful countersinks in sturdy plastic case
- Right hand cutting
- Ø 6,3 - 20,5 mm, with 90° countersinking angle
- For countersinking and deburring with three cutting edges
- Standard: DIN 335

Art. Code	g	
0767 0002	155	1
0767 Ø 6,3 - 8,3 - 10,4 - 12,4 - 16,5 - 20,5 mm		

3in1 - Tap Set HSS

- 7 piece assortment
- From M3-M10 in sturdy plastic case
- For core drilling, thread cutting and deburring
- 1/4" hexagonal shank
- With right and left hand rotation

- Material: HSS
- Standard: DIN 3126

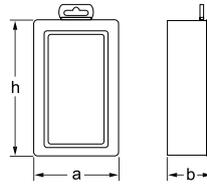

Art. Code	a mm	h mm	b mm	g	
0768 0001	70	90	30	130	1
Content	0768 M3 - M4 - M5 - M6 - M8 - M10				

Hand Taps HSS

- Universal set of hand taps M3 - M12
- With core drills
- In a robust plastic case

- Material: HSS
- Standard: DIN 352

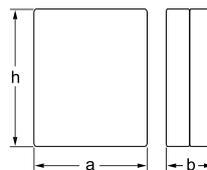

Art. Code	a mm	h mm	b mm	g	
0763 9150	115	170	40	620	1

0771 0003	800	1

Tap wrenches

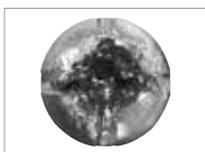

- Universal tool holder with ratchet and 2-jaw chuck
- For all tools with square or hexagonal shank (size 2)
- For taps, taps bits, bit holder with bits etc.
- With T-handle for comfortable working, adjustable and removable.
- With hardened parallel jaws, replaceable

Art. Code	Clamping range mm	a mm	h mm	g
0772 0001	2,4 - 5,5	M3 - M10	80	155
0772 0002	4,5 - 7,0	M5 - M12	100	330

Screw-IT Screw Extractor

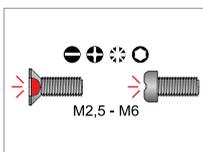

- Loosens nearly all damaged, unhardened and even rusty screws without thread repair tools
- For all threads from M2.5 - M6
- Simply drive the tip of the the MATADOR ScrewIT! into the screw head by using a hammer, then unscrew the screw

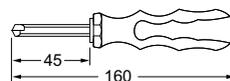

Perfect for damaged or rusted screw heads.

With impact cap for aimed release of hammer force

For all threads from M2.5 - M6.

Art. Code	a mm	g
0770 0002 M2,5 - M6	160	116

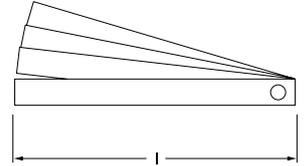

Screw IT!

Measuring tools.

■ Feeler Gauges

- Blades fold into metal case
- Blade length 100 mm
- 4" tapered blades
- Surface: Polished
- Material: Spring steel stripmaterial

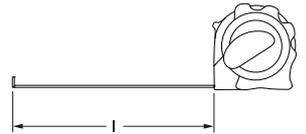

Art. Code	l mm	g		
0760 0002	13	0,05 - 1,00	70	10
0760 0003	20	0,05 - 1,00	100	10
0760 0005	13	2 - 35 / 100	50	10
0760 0006	20	2 - 40 / 100	80	10

■ Measuring Tape

- Automatic tape rewriter with return stop
- Measuring tape vaulted
- With double scale and hook for precise inside and outside measurements
- Very solid

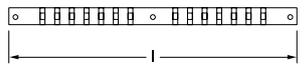

Art. Code	l m	g		
0798 0002	3	70	10	
0798 0005	5	85	10	

■ Rules, flexible

- Hardened steel
- Satin chrome finish
- Etched reading mm and 1/2 mm
- Double scale
- Material: Spring hardened steel

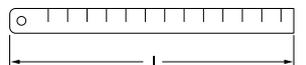

Art. Code	l mm	g		
0798 1030	300 x 15 x 0,5	20	10	

■ Rules, non flexible

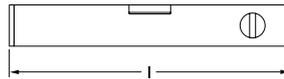

- Hardened steel
- Satin chrome finish
- Etched reading mm and 1/2 mm
- Double scale
- Material: Spring hardened steel

Art. Code	l mm	g		
0798 2030	300 x 30 x 1,0	25	5	

■ Spirit Level

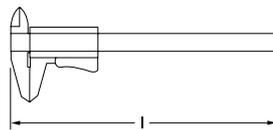

- With one horizontal and one vertical vial
- Solid acrylic block vials
- Accuracy of 0,5 mm/ metre = 0,028° in standard position
- Unbreakable, unadjustable, weather constant

Art. Code	l mm	g	
0798 9040	400	300	1

■ Precision Vernier Caliper

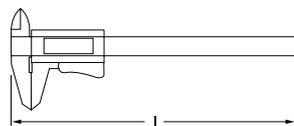

- For inside, outside and depth measuring
- Display 0.05 mm - 0.008"
- Accord. to DIN 862
- Matt chrome finish
- With raised slideways
- Vernier scale extended up to 39 mm
- Jaws 40 mm
- With thumb lock
- Material: Stainless steel

Art. Code	l mm	g	
0798 5015	150	110	1

■ Electronic Caliper

- For inside, outside, step and depth measuring (4 ways)
- Display and accuracy 0.01 mm -0.0005"
- Reversible from mm to inch
- With interface RS232C for data processing
- Accuracy according to DIN 862
- In plastic case
- Material: Stainless steel, hardened
- Surface: Matt chrome finish

Art. Code	l mm	g	
0798 5020	150	410	1

■ Hard Metal Marking Tool

- Retractable for protection of the point and prevention of injuries
- Replaceable
- Secure hold of the point via chuck
- Shaft with clip and knurled grip area

Art. Code	l mm	g	
0799 0001 Standard-Type	140	15	10

■ Scriber

- With one straight and one angled screwed-in steel point
- Handle gun metal finish and knurled

Art. Code	l mm	g	
0799 1010	250	52	10

■ Knee pads

- Knee pads in universal size
- With one belt
- Protects your knees during work

Art. Code	g	
7125 0001	50	1

■ Micro fine woven gloves

- According to CE / EN 420 / 388
- Very comfortable design and fit
- Especially breathable fabric
- With PU reinforced gripping palm
- Ideal for working with small parts
- Silicone-free, also suitable for allergy sufferer
- 12 pair / box

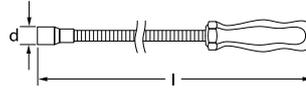

Art. Code		g	
7110 0001	L 8	10	1
7110 0002	XL 9	20	1
7110 0003	XXL 10	25	1

Pick-up tools.

■ Mini Magnetic Pick Up Tool

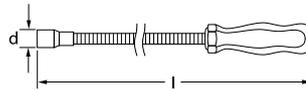

- Mini-Magnetic Pick Up Tool
- Flexible
- Diameter of magnet only 4 mm
- Perfect in household

Art. Code	g	d mm	l mm	g	
0784 0004	270	4	400	22	1

■ Magnetic Pick Up Tools

- With Neodym-magnet
- Very high capacity
- With flexible shaft

Art. Code	g	d mm	l mm	g	
0784 0005	500	8	460	60	1
0784 0001	1000	12	460	80	1
0784 0002	1800	15	520	220	1
0784 0003	3000	19	520	320	1

■ Gripping Tool with Claw

- With flexible shaft
- For gripping small pieces in otherwise inaccessible places
- Chrome plated

Art. Code	d mm	l mm	g	
0877 0001	7	540	115	1

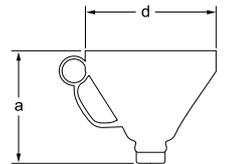

Lubrication.

■ Hopper

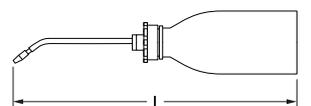

- Made of black plastic
- With strainer
- Flexible screw off tube

Art. Code	a mm	d mm	g	
0792 0001	120	160	150	1

■ Plastic Oiler

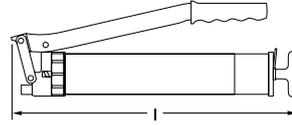

- With double-stroke pump
- Plastic

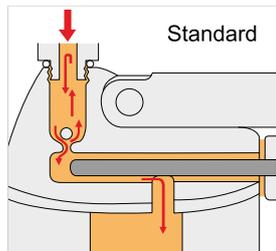

Art. Code	ccm	g	
0793 0001	300	200	5

■ Lever Grease Gun TWIN LOCK

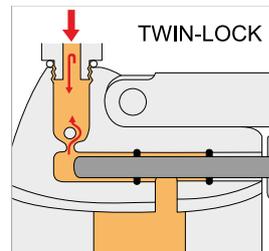

- With TWIN-LOCK system
- Against dummy-lubrication (!), the life-insurance for every bearing point
- Grease gun according to DIN 1283 - for 400 g cartridge or 500 g bulk grease
- Robust industrial construction
- Connecting thread M10 x 1
- Complete with 4-jaw hydraulic coupler, angled spout, flexible hose

Art. Code	mm	ccm	g	
0794 0005 Set		500	1700	1
0794 0001 Lever Grease Gun		500	1500	1
0794 0002 Hydraulic Coupler			80	1
0794 0003 Angled Spout	150		30	10
0794 0004 Flexible Hose	12 x 300		120	10

Grease Gun without TWIN-LOCK system - at high backpressure the grease flows back into the barrel (dummy-lubrication)

Grease Gun with TWIN-LOCK system - 2 O-rings protect the precision made piston against abrasion and prevents the flow-back of grease into the barrel

■ Talc

- Highest purity
- Lubricant for all locks, hinges, bolts, etc.
- In the car, home and in the workshop

Art. Code	ml	g	
8174 0003	100	40	1

■ Graphite

- The perfect rubber care
- For tires, tubes, seals, cuffs, soft plastics, latex, etc.
- Sputtering and possibly rub slightly
- Protects against heat and aging-related bonding

Art. Code	ml	g	
8174 0004	100	50	1

■ Rust remover

- Highly effective flow and lubrication oil
- Removes rust and all other fixed compounds on screws, nuts, iron railings, lattice towers etc.
- Lubricates everything effectively
- Highly effective against squeaking and creaking noises
- Effective wear protection

Art. Code	ml	g	
8146 0001	500	500	1

■ Brake cleaner

- Cleans and degreases brakes and all other parts
- Ideal as an universal cleaner
- Evaporates without residue and dries quickly
- Cleans brake & clutch parts without dismantling, removes brake fluid, oil, dust etc. and helps maximize brake efficiency, even removes resinous deposits

Art. Code	ml	g	
8146 0002	500	500	1

MATADOR bodywork and bumping tools. Top-grade industrial quality. Blow by blow.

Precisely forged.

Numerous dollies for all types of bodywork.

No split-off due to chamfered edges.

For the repair of all metal parts.

Bodywork and bumping tools are essential for the repair of all metal parts.

The product range of MATADOR includes all types of hammers for body work as well as numerous dollies, anvil blades and body and fender tools.

MATADOR bodywork and bumping tools have been tried and tested many times. For many years, numerous OEMs and their workshops come to trust the quality of the MATADOR body work tools.

Durable quality.

All MATADOR bodywork and bumping tools are precisely forged and manufactured in Germany and meet our strict quality standards.

As a basic equipment the MATADOR tool kits „L“ and „XL“ with all major bodywork tools have proven their value. They are a must have for every workshop.

■ Cross Pein and Finishing Hammer

- With ash handle
- With ground faces
- Blue lacquered
- Material: Hardened / tempered steel

Art. Code	l mm	mm	l mm	g	
0732 0004	160	40	300	405	1

■ Dollies and Anvil Blocks

- Drop forged
- With ground faces
- Blue lacquered
- Material: Hardened / tempered steel

Art. Code	mm	g	
0734 0005	80 x 60 x 33	1050	1

■ Body and Fender Tools

- Drop forged
- With ground faces
- Blue lacquered
- Material: Hardened / tempered steel

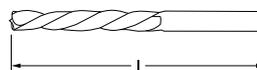

Art. Code	mm	g	
0735 0002	440 x 58 x 150	1050	1
0735 0005	300 x 50	800	1

■ Spot Weld Drill HSS-E Co 5

- For burr-free drilling and center punching
- Extreme high precision
- With center tip as ground point
- For sheet steel, brass, aluminium, zinc, copper, plastic sheets etc.
- Average tolerance: h8

Art. Code	mm	l mm	g	
0862 0004	8	80	10	10

Art. Code	mm	l mm	g	
0862 0004	8	80	10	10

■ Punch and Flange Tool

- Labor saving tool, crimps edges on sheet metals up to 1mm thickness
- With rotating head, allows to punch holes in panels also
- Single-handed, low-force operation
- Single hand push-button release
- Self opening
- Hardened jaws
- Crimping capacity 13 mm
- Jaw width 22 mm

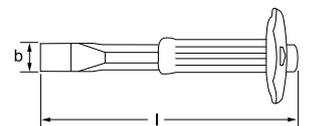

Art. Code	t mm	b mm	l mm	g	
0741 0001	20	22	290	1200	1

■ Car Body Chisel

- For cutting sheet metal, welding spots, welding grooves etc.
- With hand guard, blade size 7 x 26 mm
- Self hardening steel

Art. Code	b mm	l mm	g	
0846 0001	26	240	150	1
0846 0091	Handschutz für Karosserie-Blechmeißel		9,5	1

■ Nozzle Adjusting Tool

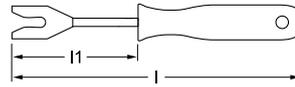

- Telescopic handle with Neodym magnetic head
- Capacity 500 g
- 6 mm diameter
- For adjusting the nozzles of the washing system, can be used to demonstrate the jet direction to the window, adjusting needle and protective cap
- With pocket clip
- Material: Special steel
- Surface: Zinc plated

Art. Code	l mm	g	
0863 0001	150 - 660	25	10

■ Door panels removal tool

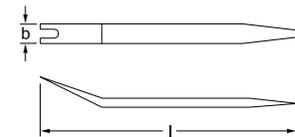

- Zum schnellen und einfachen Ausbau von Türverkleidungen
- Maulöffnung 6 mm
- Material: Spezialstahl

Art. Code	l mm	l1 mm	g	
0842 0001	176	60	90	1

■ Plastic Wedge

- For fast and easy removing of mouldings and door covering
- Avoids damage of lacquered surfaces
- One side open / bent (for loosening door / cover clips), one side with flat pin to fix plastic clips

Art. Code	b mm	l mm	g	
0843 0001	20	210	25	1

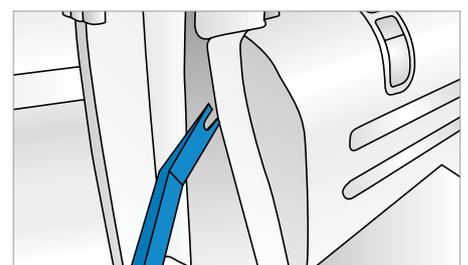

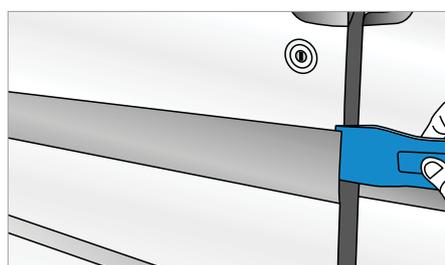

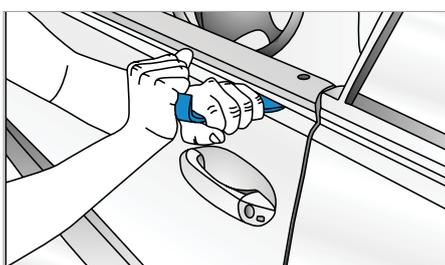

■ Trim & Panel Removal Kit

- Professional trim and panel removal kit
- Plastic tools allow you to dismantle upholstery and plastic panels without scratching or damaging painted, leather, chrome-plated and other surfaces
- For fast and convenient trim panel, upholstery and car interior elements removal (dashboard items, radios, door cards, moulding, etc.)
- Also suitable for household for many applications

Art. Code	l mm	g	
0843 9050	160 - 200	100	1

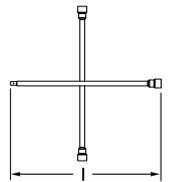

Tools for brakes / wheels / chassis. Automotive Tools.

■ Four Way Rim Wrench for cars

- Welded version
- 6 point
- With MATADOR SmartDrive profile
- Material: Chrome Vanadium
- Surface: Matt chrome finished

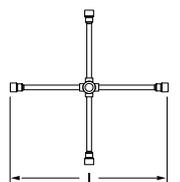

Art. Code	mm	"	l mm	g	
0350 1001	17 x 19 x 21	1/2	380	1300	5

■ Four Way Rim Wrench for trucks, forged

- With forged middle part
- High capacity, tested up to 2,000 N·m
- Arms and middle part hardened, polished heads
- Standards: DIN 3119 / ISO 6788,
- Material: Chrome Vanadium
- Surface: Matt chrome finished

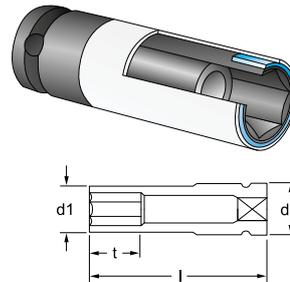

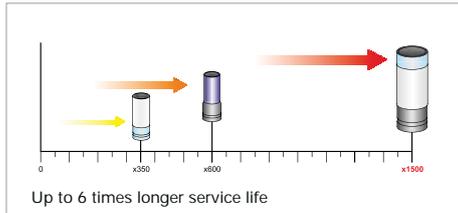

Art. Code	mm	"	l mm	g	
0356 0002	24 x 27 x 32 x 3/4"	15/16 x 1.1/16 x 1.1/4 x 3/4"	750	5750	1

SlimPOWER Impact Sockets

- For wheel mounting and dismounting
- Allow up to 6 times longer service life in comparison to other impact sockets
- With plastic sleeve to protect the rings when screwing the wheel nuts
- For use with impact wrenches
- Exchangeable plastic head with color code

- Standards: DIN 3121 / ISO 1174
- Material: Chrome Molybdenum

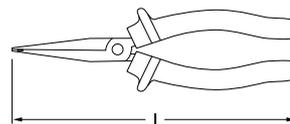

Art. Code	mm	t mm	d1 mm	d2 mm	l mm	g
7481 1170	17	20	26	25,5	86	220

7481 1210	21	20	30	29,5	86	270

Special Flat Nose Pliers

- With groove
- Enables the damage-free removal of wheel nut caps on aluminium rims
- Also suitable for flat protections etc.
- Jaw length / width: 85 / 9 mm

- Material: Chrome Vanadium

Art. Code	l mm	l"	g
0585 0014	160	8	200

Tyre Levers

- Heavy-duty version
- Especially for trucks
- For tire installation and removing
- For steel and aluminium rims
- Tips hardened

- Material: Chrome Vanadium
- Surface: Matt chrome finish

Art. Code	l mm	l"	g
0753 0002	400	16	620
0753 0003	500	20	790
0753 0004	600	24	970

■ Tyre Levers

- Double T-profile for high stability
- Drop forged
- For tire installation and removing, for steel and aluminium rims, also suitable for general purposes

- Material: Chrome Vanadium
- Surface: Matt chrome finish

Art. Code	l mm	l" g	g	
0754 0002	400	16	425	5
0754 0003	500	20	550	5

■ Pry Bars

- With octagonal shank

Art. Code	l mm	l" g	g	
0757 0001	400	16	550	5

■ Pry Bars

- Pry Bar Round Head
- For difficult applications

- Material: Chrome Vanadium
- Surface: Matt chrome finish

Art. Code	l mm	l" g	g	
0758 0001	410	20	450	5

■ Camber adjustment tool

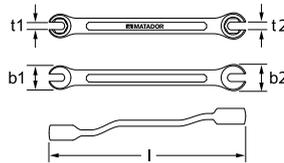

- 12,5(1/2) / 18 MM

Art. Code	l mm	l" g	g	
0202 0180	--	--	200	1

Flare Nut Wrenches

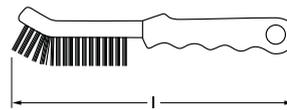

- For screwed connections on brake lines
- To reach the screws at front and back axle, reinforced design
- With 6-pt and straight slot
- Material: Chrome Vanadium
- Surface: Matt chrome finish

Art. Code	mm	Ausführung	t1 mm	t2mm	b1 mm	b2 mm	l mm	g	
0250 0001	10 x 12	straight type	7,0	8,5	20,5	22,3	150	80	10

Brake Caliper Brush

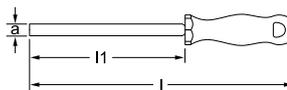

- For removal of brake dust and dirt from the caliper shaft
- For disk brakes, slim design
- With plastic handle and suspension hole

Art. Code	l mm	l"	g	
0852 0001	225	9.1/2	60	10

Brake Caliper File

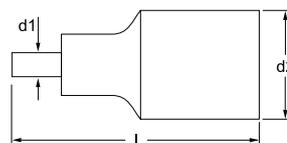

- For removal of brake dust, dirt und rust from the caliper shaft
- For disk brakes
- Cut: gross
- Coarse level cut on one side (to prevent damage of dust boot)
- With plastic handle and suspension hole
- Bevel toothed, 12 mm width
- Material: Special steel

Art. Code	a mm	l1 mm	l mm	l"	g	
0854 0001	12	155	265	10.1/2	110	10

Spreader for shock absorbers

- For spreading of the front shock absorber tube from the wheel bearing housing
- Blade black
- For VW, Audi, Ford, Peugeot etc.
- Material: Chrome Vanadium
- Surface: Matt chrome finish

Art. Code	d1 mm	d2 mm	l mm	g	
4078 0031	8,2 x 5,5	23	48	66	10

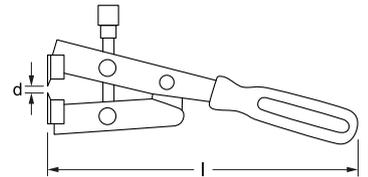

12,5 mm 1/2

Tools for hose clamps. Automotive tools.

■ Hose Clamp Pliers for torque wrenches

10 mm 3/8

- With 10 mm (3/8")-drive for the use with torque wrenches
- Enables clamping and / or compressing of hose clamps
- Suitable for new stainless steel hose clamps
- With blade in plastic handle
- Very light and robust aluminium construction

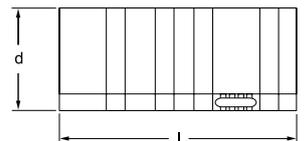

Art. Code	d mm	l mm	l"	g	
0551 0001	0,0 - 45,0	270	10.1/2	570	1

Tools for piston rings. Automotive tools.

■ Piston Ring Compressors

- For inserting the piston with ring into the cylinder, stepless adjustment, with key,
- High grade tool steel

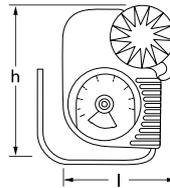

Art. Code	Ø d mm	Ø d "	l mm	l"	g

Tools for battery and cooling system. Automotive tools.

■ Antifreeze Tester

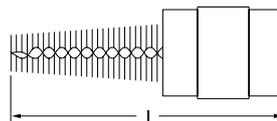

- Large, easy-to-read scale in a compact and heavy duty instrument
- Automatic temperature compensation allows accurate reading at all temperatures
- Fast, bubble free intake of fluid samples avoids measurement errors due to air bubbles
- Automatic air-lock prevents fluid loss and air bleed
- Tests all ethylene glycol antifreeze coolants

Art. Code	h mm	l mm	g	
0806 0002	131	110	130	1

■ Battery Terminal Brush

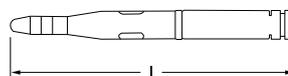

- For cleaning battery terminals
- In plastic box

Art. Code	l mm	g	
0783 0001	120	20	10

■ Voltage Tester

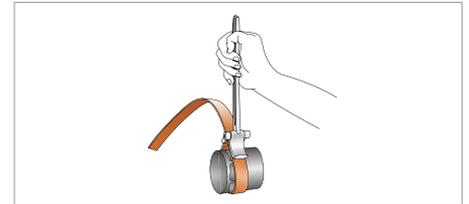

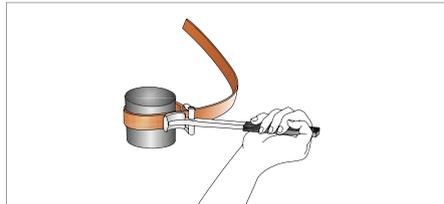

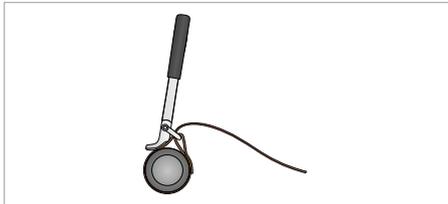

- For checking lightning and ignition systems
- Testing range 6 to 24V
- With tip, protective cap, fixed cable and clip
- blade Chrome Vanadium steel

Art. Code	l mm	g	
0633 0001	120	70	10

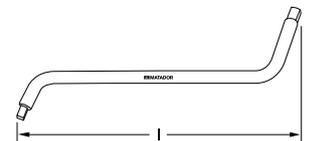

Tools for the oil service. Automotive tools.

Special Drain Plug Wrenches

- To loose and tight the filler plug and oil drain
- For the oil filter and oil drain plugs on gearbox, differential and oil pan

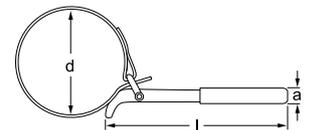

- Material: Chrome Vanadium
- Surface: Matt chrome finish

Art. Code	mm	l mm	g	
0266 0001	8 x 10	240	250	10

Universal Strap Wrenches Eco

- For oil filters and other round shaped bodies
- With cotton textile tape, rubber coated, nonskidding
- Cushion grip handle

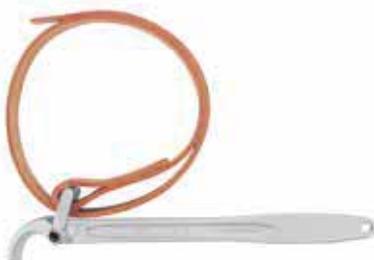

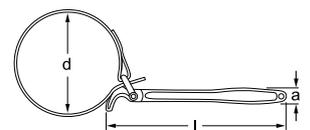

Art. Code	d mm	g	
0425 0001	max. 170	280	1
0425 0002	Ersatzband	30	1

Universal Strap Wrenches PRO

- For oil filters and other round shaped bodies
- With forged handle, heavy-duty construction
- Especially for commercial vehicles and agricultural machinery
- With cotton textile tape, rubber coated, nonskidding

- Material: Chrome Vanadium
- Surface: Matt chrome finish

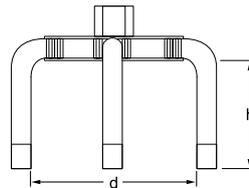

Art. Code	d mm	g

MATADOR VDE-Tools. Safety first.

Working on voltage.

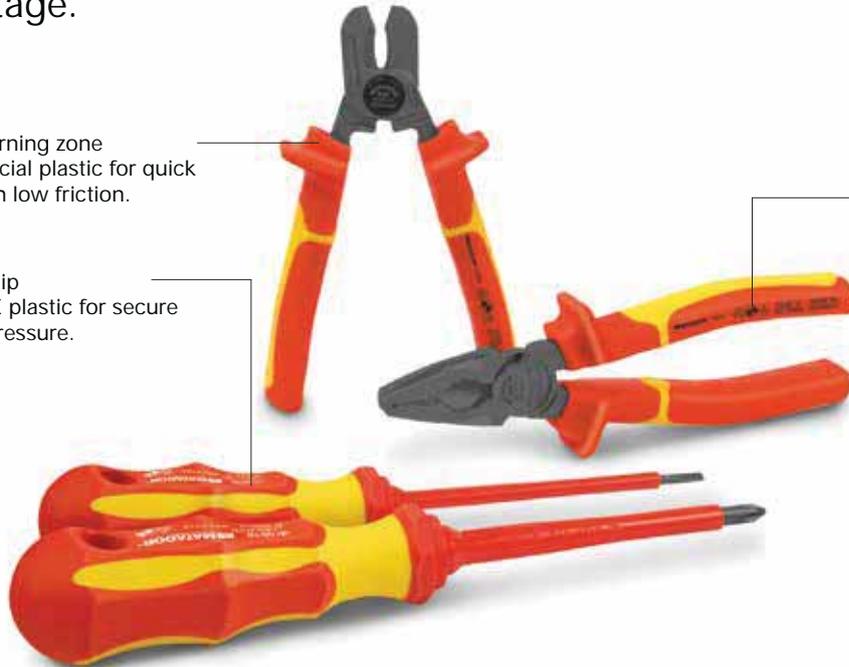

2K Red, hard turning zone made of special plastic for quick working with low friction.

2K Yellow, soft and anti-slip grip zone made of TPE plastic for secure hold with maximum pressure.

1000 V

High security by unique identification.

International standards for more safety.

In Germany as well as in most of other countries it is the law that works on hot parts are only to be conducted under certain safety regulations and by trained specialists.

The application of especially manufactured tools belongs to that. These have to be according to the international standard IEC 60900 (identically with EN 60900 for Europe and DIN EN 60900 for Germany).

Therefore all MATADOR insulated tools have the VDE approval mark additionally to the DIN EN 60900 mark. This means additional security because every production and testing point is individually examined, certified and regularly supervised by the VDE. For your safety.

Approval process during production.

The approval processes during the running production constituted by the standards are complex and make sure that the requirements of the DIN EN 60900 standard are fulfilled without exceptions.

For example tool handles should not disengage themselves during usage or get damaged. Tools will be tested by improving their resistance of heat, cold, shock and impact.

At the end of the production process every tool has to be tested with an AC voltage of 10,000 V AC and voltage of 1.500 V DC.

100% routine test and VDE certificate.

Every model of an insulated tool is put to an acid test regarding mechanical and electrical safety, before it gets a type-approval.

The VDE approval institute withdraws in irregular intervals test samples from the running production or the current stock for intensive random inspections.

The VDE-logo proves that the manufacturer goes beyond his personal responsibility determined by the DIN EN 60900 standard and lets himself be supervised by independent specialists of the VDE-institute.

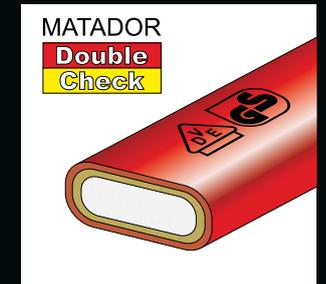

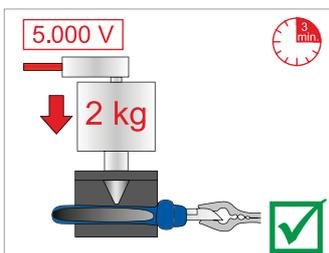

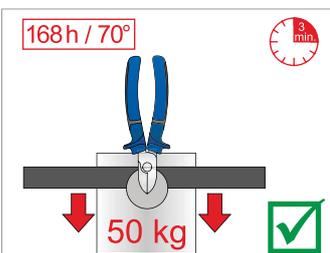

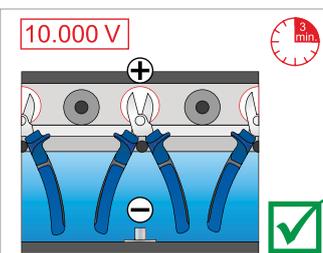

The MATADOR Double Check coating.

All MATADOR soft-plastic insulated safety tools are equipped with the MATADOR Double Check coating.

This bi-coloured double insulation offers an additional safety factor, since the yellow alert colour under the red outer layer indicates reliably damages and wear of the insulation and therefore supports the dictated regular inspection.

Whether conventional solutions with 2-component-handles or the complex tools with a double plastic insulation – both processes fulfill the requirements of the standard.

The MATADOR workshop trolley. Almost endless varieties.

RATIO.
7 or 8 drawers.

MATADOR's new workshop trolley RATIO is the premium solution for all users who need a bigger trolley than QUADRO who don't need a VARIO premium trolley.

Generous dimensions, high capacity and loadability in daily use, easily rollable and upgradeable with accessories of our comprehensive range thanks to square perforation on the side panels - that's RATIO.

The RATIO is designed for heavy industrial applications, its high-performance drawer rails have been thoroughly tested on 40.000 opening cycles.

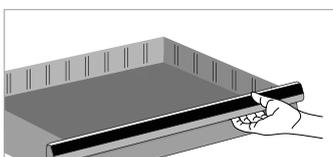

Quality starts with the sheet thickness.

As with cars the torsion resistance of a workshop trolley is mainly determined by the thickness of the metal sheet.

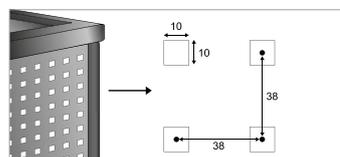

As the sheet thickness cannot be seen at first glance many sellers save on the material and use only steel sheets with a thickness of 0.7-1.0 mm. The joy of the low price is only short-lived as loadability and lifetime are only moderate.

By contrast the MATADOR workshop trolley VARIO is made with a sheet thickness of even 1.75 mm, this is almost double the thickness as other models. Thus the VARIO reaches a very high level of stability and torsion resistance which you cannot only feel but even hear. No more shaking when closing the drawers, no creaking chassis when rolling - test yourself.

Trust the inner values and enjoy solid industrial quality.

Standard Single lock the drawers on all models

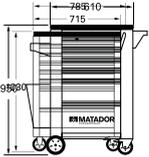

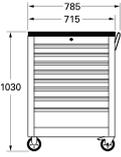

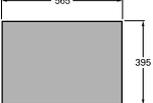

Standard square perforation for wide range of accessories

All at a glance. Workshop trolleys with 7 or 8 drawers.

Concentration on the essentials.

Compact dimensions or big size. Wide or narrow. With 6, 7 or 8 drawers. With extra broad chassis. In silver-aluminium/black, black, red, blue, green or any other color of your choice. With accessories. Empty or fully equipped with tools.

MATADOR workshop trolley range at a glance.

MTS modules for workshop trolleys. Perfect organization. See what is missing.

Soft foam inlays with black and blue tools contours.

Practice-oriented product features: Environmentally friendly, resistant to oils, fuels and detergents, heat-resistant up to 112 °C and non-flammable.

Easy recognition of missing tools.

Perfect order.

MTS - saves costs, time and nerves.

See what is missing.

Better organization and maximum cleanliness.

MTS - all benefits at a glance.

Already more than 10 years ago MATADOR supplied the first workshop trolleys with MTS inlays.

MTS are black and blue inlays made of 2-component soft foam into which tools can be embedded vibration-proof:

No more searching, perfect order. You'd better spend your time with more important activities.

- Designated place created for every tool
- Enables the operator to find the tools faster
- Provides a visual indication of any missing tool
- Protects tools from damage
- Supports 6 sigma in your workplace
- Promotes tool accountability
- Enhances productivity
- Speeds up inventory checks and audits

Today it is a standard but back then it was a real innovation: „MATADOR Tool System“ MTS.

Missing tools can quickly be recognized which is budget-friendly and cost-saving

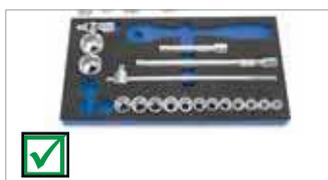

And for maximum cleanliness after the work is done: Simply clean under running water, dry - ready.

No organization, no control.

Better organization but no indication of missing tools.

Perfect organization, see what's missing.

All at a glance. 86 modules for tools, countless varieties.

Perfectly organized tools for every field of application.

MTS unlimited edition.
350 high quality tools. 8 modules. That's it.

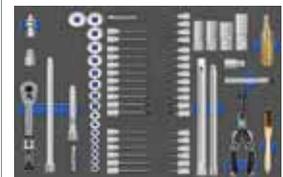

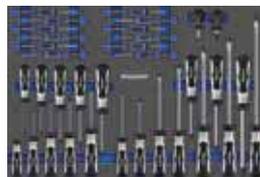

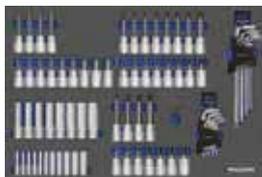

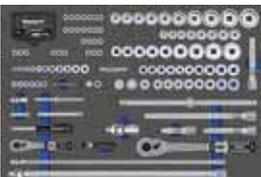

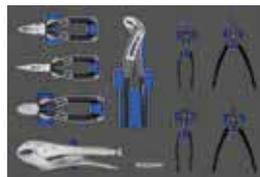

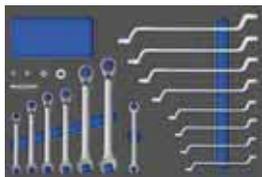

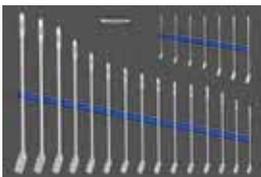

MTS

unlimited edition

Focusing on the essentials.

All inclusive.

MTS unlimited edition: 8 modules with 350 high quality tools.

Additional modules for automotive repair.

Which tools do you need?

It depends... Your tasks change.

Do you really want to spend your time looking for the right tools for your latest challenge? Do your new tools fit into the tool modules and tool storage system you already use? Probably not.

When you check the market you will find almost uncountable offers of fully equipped tool trolleys - but **what do you really need?**

Save your time and keep an overview because we have a better idea:

We set up a **comprehensive database** including all equipped tool trolleys that we have ever supplied to **BMW, Ford, Jaguar, Land Rover, Mercedes-Benz, Volkswagen** and other customers, and we broke them down to the single tool.

Additionally, we included important **OEM specifications - like Volkswagen VAS 275 001** - and took the tool trolley range of other tool manufacturers into consideration. The unsurprising result:

Around **88%** of the tools listed can be found in any specification because these tools are needed in every workshop.

We added another **10%** of tools that make sense and give you enough scope

for future tasks. So you do not need to look for further additions again.

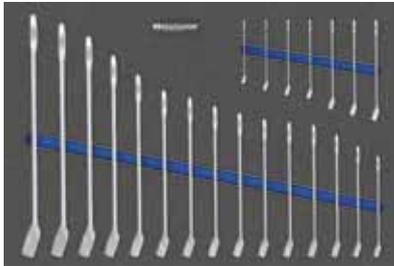

What came out is our **"MTS unlimited edition" with 350 tools that cover 98% of all application fields.** It's a safe bet.

For the remaining 2% we saved you lots of time.

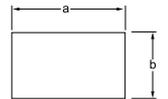

Make something out of it!

For automotive repairs we added two modules with a comprehensive 10 (3/8) socket set and another module for car body work.

1. Application

1.1 These General Terms & Conditions of Delivery (hereinafter referred to as "Terms") shall apply to all contracts, including but not limited to future contracts, with entrepreneurs, legal persons under public law and special funds under public law (hereinafter referred to as "Purchaser") on deliveries and other services, with the inclusion of contracts to produce a work, wage labour operations and the delivery of fungible and non-fungible things, by MATADOR GmbH & Co. KG, Morsbachtalstrasse 17, 42855 Remscheid (hereinafter referred to as "MATADOR"). Any General Terms & Conditions of the Purchaser shall apply only if and to the extent that these are explicitly confirmed by MATADOR in writing. In particular, any silence by MATADOR regarding any differing terms and conditions shall not be considered as any acknowledgement or consent, not even for any future contracts. The Terms shall apply in lieu of any General Terms & Conditions of the Purchaser, even if any acceptance of order is provided for thereunder as unconditional acknowledgement of the Purchaser's General Terms & Conditions.

1.2 Any individual agreements (e.g. master delivery contracts, quality assurance agreements) and/or any statements in any order confirmation shall take precedence over these Terms. In case of doubt, any commercial terms need to be interpreted in accordance with the Incoterms[®] 2020 issued by the International Chamber of Commerce (ICC) in Paris.

2. Contract Conclusion

2.1 Offers by MATADOR shall be non-binding; this shall also apply to any statements in any catalogues and the respective valid price list. Illustrations, statements of dimension and weight in printed matter, web offers and any other publications of MATADOR shall prevail only approximately, unless exact conformity is required to ensure usability for the purpose provided for in the contract. They shall not be deemed to be guaranteed characteristics but descriptions or identifications of the product or service. Any deviations customary in the trade and any deviations which are the result of legal regulations or represent technical improvements, as well as any replacement of components by equivalent parts shall be deemed to be in accordance with the contract only to the extent that they have no negative impact on any usability for the purpose provided for in the contract.

2.2 Any purchase order placed by the Purchaser for the goods shall be deemed to be a binding offer. Unless otherwise provided for in the purchase order, MATADOR shall be entitled to accept such offer within four (4) weeks of receipt by MATADOR.

2.3 Order confirmations may be given either in writing or text form or by supply of the goods or notification of readiness for shipment (hereinafter referred to as "Confirmation") to the Purchaser. Where notice of Confirmation is not given within the deadline for Confirmation set out in clause 2.2, the contract on the confirmed/delivered goods shall be deemed to have been accepted, unless the Purchaser objects within two weeks from receipt of the (belated) notice of Confirmation or, where the goods are supplied without any order confirmation being sent beforehand, accepts the goods and fails to object within two weeks after receipt. The same shall apply in case of any deviations in the order confirmation and/or delivery of goods, e.g. due to any packaging units used, compared to the purchase order.

2.4 The Purchaser shall comply strictly with any and all nationally or internationally applicable import or export provisions, obtain the necessary approvals, where appropriate, and provide in due course any information and document required in the respective country of delivery for export, shipment or import. Any agreed Delivery Times (clause 4), where appropriate, shall become obsolete by any delays due to any export checks or approval procedures. In this case, MATADOR and the Purchaser shall mutually agree on reasonable new deadlines. Where any necessary approvals are not granted within a period of 6 calendar weeks following the delay, the contract shall be deemed to not have been concluded with respect to the goods or services concerned. Where the Purchaser culpably violates this clause 2.4 sentence 1, the Purchaser shall, upon first demand, indemnify MATADOR from any and all claim and reimburse MATADOR for any damage asserted by any upstream suppliers or licensors of MATADOR, or other third parties towards MATADOR. The same shall apply to any damage and expense incurred by MATADOR.

3. Custom-Made Products

Where MATADOR and the Purchaser enter into any contract on the delivery of goods and/or packaging (beyond series production) custom-made upon the Purchaser's individual needs (hereinafter referred to as "Custom-Made Product"), MATADOR shall be entitled to retrospectively make changes to the scope of delivery, provided that the changes or deviations are reasonably acceptable for the Purchaser, taking into account the interests of

MATADOR. Custom-Made Products shall also include any serial products or any packaging that is to be specially marked at the Purchaser's request. According to technical requirements MATADOR may determine any technical or design features that have not been expressly ordered or specified.

4. Delivery Time

4.1 Any deadlines or dates stated by MATADOR for delivery of the goods (hereinafter referred to as "Delivery Deadlines") shall be considered as approximately, unless any fixed deadline or date has been expressly agreed to by MATADOR. Where dispatch was agreed, any Delivery Deadlines, unless expressly stated or agreed otherwise, shall relate to the time of handover to the carrier, freight forwarder or any other third party engaged to perform transport.

4.2 Any and all Delivery Deadlines shall commence (a) on the day the purchase price is received in full (including VAT and shipping costs), where delivery on advance payment has been agreed, or (b) on the day the purchase contract is concluded, where payment by cash on delivery or on account has been agreed. Moreover, any Delivery Deadlines shall apply only subject to all details of the respective purchase contract being clarified and all obligations of the Purchaser being met in good time, e.g. provision of all regulatory certifications or presentation of letters of credit.

4.3 Where any non-compliance with Delivery Deadlines is due to

- force majeure (e.g. war, acts of terror, civil commotion, pandemics, strike, lockout),
- any attacks by third parties on any IT systems of MATADOR that cannot be prevented despite all due care,
- any impediments for which MATADOR is not responsible due to any German or other applicable national or international legal regulation, embargoes or other sanctions or
- due to any – untimely and/or improper – supply to MATADOR, unless said supply is caused by fault of MATADOR,

any agreed Delivery Deadlines shall be extended accordingly to an appropriate extent. MATADOR shall advise the Purchaser of the beginning and end of any such circumstances as soon as possible.

4.4 MATADOR shall be entitled to deliver partial quantities if

- the partial quantity is sellable for the Purchaser in line with the purpose intended under the contract,
- delivery of the remaining ordered goods is secured and the Purchaser does not incur any significant additional effort and expense or any significant additional costs.

4.5 Where any binding Delivery Deadlines cannot be complied with for any reason for which MATADOR is not responsible, MATADOR shall inform the Purchaser thereof without undue delay whilst advising the Purchaser of the anticipated new Delivery Deadline. If said reason still exists regarding the new Delivery Deadline either, MATADOR shall be entitled to withdraw from the contract in whole or in part; payments or other contributions already rendered by the Purchaser shall be reimbursed without undue delay. Reasons for which MATADOR is not responsible in sense of this clause 4.5 shall include but are not limited to cases specified in clause 4.3.

4.6 If MATADOR defaults on any Delivery Deadline, the Purchaser may demand compensation for the damage caused by default besides delivery in accordance with clauses 10.1 and 10.2. In case of ordinary negligence, however, said compensation shall be limited to an amount equal to 0.5% for each completed week of delay and a total maximum amount of 5% of the purchase price agreed for the delayed delivery. The Purchaser's right to claim damages instead of delivery in accordance with clauses 10.1 and 10.2 shall remain unaffected.

5. Passing of Risk, Shipping Method, Default of Confirmation

5.1 The risk of accidental destruction and of accidental deterioration of the goods as well as the risk of delay for mail-order transactions, including for any deliveries free domicile, shall pass to the Purchaser with the goods being handed over to the haulier or freight forwarder, but no later than with the goods leaving the warehouse or works. In case of any delay in or failure of shipment for any reasons for which the Purchaser is responsible, the risk shall pass to the Purchaser from that day onwards on which the goods are ready for shipment and MATADOR has advised the Purchaser thereof.

5.2 The type of both packaging and transport shall be determined as MATADOR reasonably sees fit.

5.3 If the Purchaser is in default of acceptance of delivery or fails to perform any act of cooperation or any delivery is delayed for any other reasons for which the Purchaser is responsible, MATADOR shall be entitled to demand

compensation for damage suffered therefrom, including but not limited to extra expenditures (e.g. warehousing costs). MATADOR shall be entitled to bill a lump-sum compensation in the amount of 1% of the invoice amount for each commenced month of delay. However, the proof of any higher damage by MATADOR and the claims by law (in particular reimbursement of extra expenditures, reasonable compensation, termination) shall remain unaffected. The Purchaser may prove that MATADOR has incurred no or significantly lower damage. The Purchaser must not refuse any receipt of deliveries due to any insignificant delays.

6. Prices and Terms of Payment

6.1 Unless otherwise agreed, the list prices of MATADOR valid on the day of Confirmation shall apply. The prices are EXW Remscheid, Germany (Incoterms[®] 2020), plus statutory VAT, as well as, for export deliveries, plus customs duties, charges and any similar public dues. Any agreed extra or special services, where appropriate, shall be billed additionally.

6.2 Unless expressly agreed otherwise, any payments are to be effected in line with the payment terms stated on the invoice as of the date of the invoice, otherwise immediately net. MATADOR must be able to dispose of the amount on the due date.

6.3 Payments may be effected only by bank transfer or SEPA direct debiting procedure.

6.4 In case of default of payment, the outstanding amounts shall be subject to 8% interest p. a. from the due date, with the assertion of any higher interest rates and further damage in case of default remaining unaffected.

6.5 If it becomes apparent after conclusion of the contract that any payment claims of MATADOR will be at risk due to any insufficient ability of the Purchaser to perform, or if any other circumstances arise, implying that the Purchaser's ability to perform will deteriorate considerably, MATADOR may refuse supply according to § 321 German Civil Code. This shall also apply to the extent that the duty to perform (in particular payment of the purchase price) is not yet due.

6.6 Any offsetting against any counterclaims of the Purchaser or any withholding of payments on account of any such claims shall be admissible only to the extent that the counterclaims are uncontested or have been finally and non-appealable established or result from the same order under which the delivery in question has been performed.

7. Retention of Title

7.1 Title to the goods delivered shall remain with MATADOR until the purchase price (including VAT, shipping costs) has been paid in full (hereinafter referred to as "Reserved Goods").

7.2 Moreover, title to the goods delivered shall remain with MATADOR until any and all claims, in particular the respective balance claims due to MATADOR as part of the business relationship (balance reservation), have been met (hereinafter likewise referred to as "Reserved Goods"). This shall also apply to any claims arising in future and any conditional claims, including if any payments are effected on any specifically designated claims. This balance reservation shall finally lapse with all claims still outstanding at the time of payment and covered by this balance reservation have been settled. The balance reservation shall not apply, however, to any advance payment or cash transactions in terms of § 142 German Insolvency Code. Where requested by the Purchaser, MATADOR shall at its own discretion release the Reserved Goods as well as the things or claims taking their place to the extent that their value exceeds the amount of the secured claims by more than 20%.

7.3 The Reserved Goods must be neither pledged nor assigned as security to any third parties before the secured claims have been paid in full. In case of any attachments, seizures or any other dispositions or interventions by third parties, the Purchaser shall refer to the title of MATADOR and shall inform MATADOR thereof without delay to enable MATADOR to enforce any titles. Where the third party is unable to reimburse MATADOR for the court and out-of-court costs arising in this context, the Purchaser shall be liable towards MATADOR for these.

7.4 Until revoked and except for the cases set out in clause 7.3, the Purchaser shall be authorised to process and sell the Reserved Goods in proper business transactions.

7.5 Any reworking and processing of the Reserved Goods shall be effected for MATADOR as manufacturer in terms of § 950 German Civil Code, without incurring any obligation on MATADOR. Where the Purchaser processes, combines or intermixes the Reserved Goods with any other goods, co-title to the new goods shall be in proportion of the invoice value of the Reserved Goods to the invoice

value of the other goods used. In the event that the title of MATADOR lapses by any combination or intermixture, the Purchaser shall already now transfer to MATADOR the titles due to the Purchaser to the new stock or the thing to the extent of the invoice value of the Reserved Goods and shall keep them safe with the due care and diligence exercised by a prudent businessperson and free of charge for MATADOR. Furthermore, the co-titles of MATADOR shall also be deemed to be Reserved Goods in terms of clause 7.2.

7.6 The claims arising from the sale of the respective Reserved Goods shall already now be assigned by the Purchaser to MATADOR by way of security in full or in the amount of any co-title share of MATADOR (see clause 7.5) together with any and all securities acquired by the Purchaser for the claims. MATADOR hereby accepts the assignment. The same shall apply to any other claims that take the place of or arise otherwise regarding the Reserved Goods, such as insurance claims or claims from tort in case of loss or destruction. MATADOR revocably authorises the Purchaser to collect in the Purchaser's own name the claims assigned to MATADOR. This authorisation shall lapse when revoked by MATADOR, such revocation being possible in case of any breach of contract, in particular any default of payment by the Purchaser.

7.7 If MATADOR lawfully withdraws from the contract in case of any breach of contract, in particular default of payment, by the Purchaser, MATADOR shall be entitled to demand surrender of the Reserved Goods.

8. Industrial Property Rights

8.1 MATADOR reserves title and/or copyright to all offers and cost estimates submitted by MATADOR as well as to all drawings, illustrations, calculations, leaflets, catalogues, samples, models and other documents and aids provided to the Purchaser. The Purchaser must not make these objects or their contents accessible to any third parties, make them public, use or reproduce or allow any third party to use or reproduce them without explicit consent by MATADOR. Where requested by MATADOR, the Purchaser must return these objects and information in full and has to destroy any copies made of them, where appropriate, once the Purchaser no longer needs them in proper business transactions or if no contract is concluded following any negotiations.

8.2 Any right by the Purchaser to use the name of MATADOR or any MATADOR product designations for any web domains shall exist only where and to the extent that MATADOR expressly grants the Purchaser any such right by written declaration.

8.3 Unless expressly agreed otherwise, MATADOR shall merely be obliged to perform delivery of the goods in the country of the place of delivery without infringing any industrial property rights and/or copyrights of third parties (hereinafter referred to as "IPR").

8.4 The Purchaser shall advise MATADOR in writing without undue delay if any claims are asserted against the Purchaser on account of any infringement of IPR to the goods delivered by MATADOR. In case that any IPR of third parties is infringed by the goods delivered due to any circumstance for which the Purchaser is not responsible, MATADOR shall, at its own option and expense, modify or exchange the goods delivered such that any rights of third parties will no longer be infringed, but the goods delivered continue to fulfil the functions contractually agreed, or shall get the Purchaser the right of use by entering into a licence agreement with the third party. If MATADOR fails to do so within a reasonable period, the Purchaser shall be entitled to withdraw from the contract or to reduce the purchase price appropriately. Any damage claims of the Purchaser shall be subject to the restrictions of clause 10.

9. Warranty, Defects

9.1 Subject to this clause 9, warranty (including but not limited to incorrect and short delivery as well as improper assembly/installation or inadequate instructions) shall be governed by applicable law. In any case, the legal regulations regarding reimbursement of expenses in case of final delivery of any newly manufactured goods to a consumer (supplier recourse under §§ 478, 445a, 445b or §§ 445c, 327(5), 327u of the German Civil Code) shall remain unaffected, unless any equivalent compensation has been agreed, e.g. as part of any quality assurance agreement.

9.2 Basis of the liability of MATADOR for defects shall, first of all, be the agreement reached on the quality and the presupposed use of the goods (including accessories and instructions). A quality agreement in this sense shall be deemed to be all product descriptions and manufacturer's specifications which are the subject-matter of any individual contract or had been announced publicly by MATADOR (in particular in catalogues or on the Internet on the MATADOR website) at the time the contract is concluded. To the extent that any specific quality had not been assured or separately agreed in any materi-

als distributed or other publications made by MATADOR, it needs to be assessed pursuant to the legal regulation whether any defect exists or not (§ 434(3) of the German Civil Code). MATADOR shall not be liable for any (public) statements by any third parties in this respect.

9.3 For any goods with digital elements or any other digital contents, MATADOR shall owe any provision and, where appropriate, any updating of the digital contents only to the extent that this follows explicitly from any quality agreement under clause 9.2. MATADOR shall not be liable for any (public) statements by any third parties in this respect either.

9.4 The limitation period for all claims for defects, including damages claims, shall be one year from delivery. This shall not apply to the extent that any longer periods prescribed by mandatory law apply, e.g. in cases of any injury to life, body or health, any breach of duty by MATADOR by wilful intent or gross negligence, any fraudulently concealed defect or any non-compliance with any quality guarantee. The legal provisions on suspension of expiry, suspension and recommencement of the periods shall remain unaffected.

9.5 Any assertion of claims for defects by the Purchaser shall be subject to the Purchaser having complied with the Purchaser's legal duties to inspect and to claim defects (§§ 377, 381 of the German Commercial Code). If any defect becomes evident at the time of delivery or inspection or at any later point in time, MATADOR needs to be advised thereof in writing without delay. This shall also apply to any goods intended to be built in, attached or installed, even if the defect arising from the breach of any of these duties became apparent only after the corresponding processing; in this case, the Purchaser shall not have any claims to reimbursement of corresponding costs. Where any shortages are established, gross and net weight of the shipment need to be determined and copies of the delivery notes and freight documents need to be sent, otherwise MATADOR will not be able to handle the process.

9.6 In case of delivery of defective goods, MATADOR may first choose within a reasonable deadline whether subsequent improvement or replacement delivery will be performed; the Purchaser may reject any type of remedy chosen by MATADOR that is unreasonable for the Purchaser in an individual case. The right of MATADOR to refuse remedy according to German Civil Code shall remain unaffected.

9.7 The Purchaser shall give MATADOR the time and opportunity required to perform remedial work. In case of a defect, the Purchaser shall keep the goods ready for inspection. Where requested by MATADOR, the Purchaser shall send the defective goods to MATADOR free of any transport cost. MATADOR will reimburse the costs of the least expensive shipping method where the notice of defects is justified.

9.8 If any reasonable deadline to be set by the Purchaser for remedial work expired or is dispensable pursuant to the legal regulations, the Purchaser may withdraw from the contract or reduce the purchase price pursuant to the legal provisions. No right of withdrawal shall exist, however, in case of any insignificant defect.

9.9 In case of any defects, any claims of the Purchaser for damages or reimbursement of cost shall be governed by clause 10 below and shall otherwise be excluded.

10. Liability for Damages

10.1 MATADOR shall be liable for damages on account of any breach of contractual and non-contractual duties, including for any executives and any other persons used to perform an obligation, only in case of intent or gross negligence. Moreover, any liability by MATADOR in case of slight negligence shall be limited to foreseeable damages typical for the contract. Other than that, any liability, including for any indirect damage or consequential damage shall be excluded.

10.2 The above limitations shall not apply in case of any culpable violation of material contractual duties. The above limitations shall further not apply in case of any culpably caused damage to life, body or health, or in case and to the extent that MATADOR has accepted any guarantee for the quality of the delivered goods or in any cases of mandatory liability, e.g. under the German Product Liability Act.

10.3 MATADOR shall bear reasonable expenses in connection with remedy of defects, in particular reasonable in proportion to the purchase price of the goods, but in no case more than 100% of the purchase price. MATADOR shall bear any further expenses, e.g. sorting costs, only in accordance with clauses 10.1 and 10.2 above. This shall apply without prejudice to any mandatory legal regulations.

11. USA Sales Prohibition

11.1 Special requirements regarding packaging, marking, guarantees and operating instructions shall apply to the United States of America (hereinafter referred to as "USA"). The Purchaser shall thus be prohibited from selling or delivering, either directly or indirectly, any MATADOR products to any buyers in the USA.

11.2 The Purchaser shall be obliged to impose this sales prohibition on the Purchaser's buyers as well. Besides, the Purchaser shall ensure within the bounds of possibility that any customers who, to the Purchaser's knowledge, want to or will export such products into the USA will not be supplied.

12. Return Shipments

12.1 MATADOR shall not be obliged to accept return shipments of any non-defective goods, unless this has been expressly agreed with the Purchaser beforehand or MATADOR has given its prior consent.

12.2 Where any goods are taken back in line with clause 12.1 above, the Purchaser shall receive a credit note for any resaleable goods in their original packaging in the amount of 80% of the calculated (net) price. Any costs for any refurbishment and repackaging shall be additionally deducted from the credit note amount based on the expenses incurred. The credit note may be offset only against deliveries of new goods. Any isolated tools may basically not be taken back for reasons of safety.

13. Code of Conduct and Act on Corporate Due Diligence Obligations in Supply Chains

13.1 MATADOR has adopted a comprehensive Code of Conduct. Accordingly MATADOR is obliged, among others, to ensure ecological and social responsibility. The Code of Conduct shall be provided to the Purchaser upon request. Any codes of conduct published (irrespective of how and where) or directly sent to MATADOR by the Purchaser are not binding to MATADOR, unless this has been separately agreed to in writing. Any silence by MATADOR regarding any code of conduct of the Purchaser or third parties shall not be regarded as its acknowledgement or acceptance either.

13.2 Beginning of 2024 MATADOR is obliged to comply with the Act on Corporate Due Diligence Obligations in Supply Chains. Any individual requests of the Purchaser for information or adherence to that end shall hence not be required and will not be responded to by MATADOR.

14. Place of Performance, Place of Jurisdiction and Applicable Law

Place of performance, including but not limited to any duties of the Purchaser, shall be Remscheid. Place of jurisdiction for all disputes arising out of or in connection with any and all contractual relationship between the Purchaser and MATADOR shall be Remscheid. At its own discretion MATADOR may also sue the Purchaser at its registered seat. All legal relationships between MATADOR and the Purchaser shall be governed by German law to the exclusion of any conflict of laws principle and to the exclusion of the United Nations Convention on Contracts for the International Sale of Goods (CISG).

15. Miscellaneous

Unless otherwise agreed, any legally relevant statements and notices by the Purchaser in relation to the contractual relationship (e.g. setting of deadlines, notice of defects, withdrawal or reduction) need to be made or given in writing in terms of § 126 of the German Civil Code. Any legal formal requirements and any further proofs, in particular in case of any doubts as to the declarant's legitimation, shall remain unaffected.

(Effective: 12/2024)

Be a MATADOR.

Stay tuned.
